For disease control on golf course turfgrass

Active Ingredient:
Boscalid: 3-pyridinecarboxamide, 2-chloro-N-(4'-chloro(1,1'-biphenyl)-2-yl)- ................................................. 70.0%
Other Ingredients: ................................................................................................................................................. 30.0%
Total: .................................................................................................................................................................. 100.0%

EPA Reg. No. 7969-196
EPA Est. No.

KEEP OUT OF REACH OF CHILDREN

WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See inside booklet for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357).

Net Contents:
**Precautionary Statements**

**Hazards to Humans and Domestic Animals**

**Warning.** Causes substantial but temporary eye injury. Harmful if absorbed through skin. Harmful if swallowed. DO NOT get in eyes or on clothing. Avoid contact with skin, eyes or clothing. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

**Personal Protective Equipment (PPE)**

Applicators and other handlers must wear:

- Protective eyewear (goggles, face shield, or safety glasses)
- Long-sleeved shirt and long pants
- Chemical-resistant gloves
- Shoes plus socks

Follow the manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

**User Safety Recommendations**

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**Environmental Hazards**

DO NOT apply directly to water, areas where surface water is present, or to intertidal areas below the high water mark. DO NOT contaminate water when disposing of equipment washwaters.

**Surface Water Advisory**

This product may contaminate water through drift of spray in wind. This product has a potential for runoff according to the pesticide’s “mean” soil partition coefficient (15 mL/g2) for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecast to occur within 48 hours. Sound erosion control practices will reduce this product’s contribution to surface water contamination.

**Directions For Use**

It is a violation of federal law to use this product in a manner inconsistent with its labeling. DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

This product is for golf course use only. Not for use on residential turfgrass, turfgrass being grown for sale, or other commercial use such as sod production, seed production, or for research purposes.
FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL.

Nonagricultural Use Requirements
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, nurseries, or greenhouses.

DO NOT enter or allow others to enter treated areas until sprays have dried.

Storage and Disposal

DO NOT contaminate water, food, or feed by storage or disposal.

Pesticide Storage. DO NOT store at extreme temperatures. Store in a dry place away from heat or open flame.

Pesticide Disposal. Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility. If these wastes cannot be disposed of according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal (for paper or plastic bags)
Nonrefillable Container. DO NOT reuse or refill this container. After completely emptying container into application equipment, dispose of empty bag in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Triple rinse containers small enough to shake (capacity ≤ 50 pounds) as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Storage and Disposal (continued)

Pressure rinse as follows: Empty the remaining contents into application equipment or mix tank. Hold container upside down over application equipment or mix tank, or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

In Case of Spill
In case of large-scale spillage regarding this product, call:
CHEMTREC 1-800-424-9300
BASF Corporation 1-800-832-HELP (4357)

Steps to be taken in case material is released or spilled:
Wear the personal protective equipment specified on the label. Recover the material for reuse according to the label whenever possible. Sweep and/or shovel up the spilled material into an appropriate closed container. Avoid the creation of dusty conditions. Remove and wash clothing and personal protective equipment prior to reuse. Keep the spill out of all sewers and open bodies of water.

Product Information
Emerald® fungicide is a systemic anilide fungicide for the control of dollar spot (Sclerotinia homoeocarpa) and bentgrass dead spot (Ophiosphaerella agrostis) in turfgrass grown on golf courses. Optimum disease control is achieved when Emerald is applied in a regularly scheduled preventive spray program and is used in a rotation program with other effective fungicides. Because of its high specific activity, Emerald has good residual activity against target fungi.

For the control of turfgrass diseases not listed on this label, Emerald may be tank mixed with labeled rates of other fungicides. Follow label directions of any tank mix product and apply at the specified rate based on target disease. All applications should be made according to the use directions that follow. Failure to follow directions and precautions on this label may result in turfgrass injury and/or inferior disease control.

Application Information
Emerald is a systemic fungicide for the control of dollar spot and bentgrass dead spot on golf course turfgrass. Emerald may be applied as a solo foliar spray or in tank mixes with other registered turfgrass fungicides. DO NOT exceed the specified application rate or fail to comply with use restrictions listed in the Resistance Management and Restrictions and Limitations. All applications should be made according to the use directions that follow.

Uses and Tolerances
Emerald can be used only on turf grown on golf courses. Due to variability within turfgrass species, application techniques and possible tank mixes, neither the
manufacturer nor the seller has determined if Emerald® fungicide has adequate tolerance on all turfgrasses under all conditions. Therefore, apply the specified rate of Emerald on a small test area under conditions expected to be encountered and monitor for any adverse effects before applying Emerald to the targeted area.

**Spray Instructions**

For maximum efficacy, Emerald should be applied prior to or in the early stages of disease development. For maximum efficacy, apply Emerald at the rates indicated in Table 1.

**Application Rates and Intervals for Emerald fungicide on Golf Course Turfgrass**

In 2 to 4 gallons of water per 1000 square feet (87 to 174 gallons per acre). Use the shorter specified application interval and/or the higher specified rate when prolonged favorable disease conditions exist. Applications should be repeated at the specified interval as necessary.

- **Emerald** is most effective when applied preventively.
- Actual length of disease control will vary depending on environmental conditions, disease pressure, and turfgrass management practices.
- Calibrate sprayer prior to use.
- After application, allow foliage to dry prior to mowing or irrigation.
- Apply Emerald using sufficient water volume and pressure for adequate coverage of the foliage.
- Apply Emerald as instructed in Specific Use Directions with ground spray equipment.

**Resistance Management**

The active ingredient in Emerald is boscalid, an anilide Group 7 (carboxamide) fungicide. Boscalid is effective against strains of pathogens, such as dollar spot, that are resistant to other fungicides, such as the dicarboximides, sterol inhibitors, or benzimidazoles. Fungal isolates resistant to anilide fungicides, such as boscalid, may eventually dominate the fungal population if boscalid is used predominantly and repeatedly in the same area in successive years as the primary method of control for the targeted pathogen species. This may result in reduction of disease control by Emerald or other Group 7 fungicides.

To maintain the performance of Emerald in turfgrass, DO NOT exceed the total number of sequential applications of Emerald. Adhere to the label instructions regarding the consecutive use of Emerald.

To delay the development of fungicide resistance:

- **Tank mixtures**

  Use tank mixtures with fungicides from different target site of action groups that are registered/permitted for the same use and that are effective against the pathogens of concern. Use at least the minimum labeled rates of each fungicide in the tank mix.

- **Integrated Pest Management (IPM)**

  Integrate Emerald into an overall disease and pest management program. Follow cultural practices known to reduce disease development. Use Emerald in advisory (disease forecasting) programs that recommend application timing based on environmental factors favorable for disease development.

- **Monitoring**

  Monitor efficacy of all fungicides used in the disease management program against the targeted pathogen and record other factors that may influence fungicide performance and/or disease development. If Emerald appears to be less effective against a pathogen that it previously controlled or suppressed, contact a BASF representative or local turfgrass expert for further investigation.

**Addition of Additives**

Due to the large number of additives or adjuvants that may be used, neither the manufacturer nor the seller has determined whether Emerald can be used safely with all additives on golf course turfgrass.

**Tank Mixing Information**

**Tank Mix Partners/Components**

Emerald is compatible with most fungicide, insecticide and fertilizer products. If tank mixtures are used, adhere to restrictions due to rates, label directions and precautions on all labels. Physical incompatibility, reduced disease control, or turfgrass injury may result from mixing Emerald with fungicides, herbicides, insecticides, additives, or fertilizers.

To improve control of certain diseases, Emerald may be tank mixed with other effective fungicides such as Curalan® EG fungicide, Iprodione Pro fungicide or Propiconazole Pro fungicide.

**Compatibility Test for Tank Mix Components**

Add components in the following sequence using 2 teaspoons for each pound or 1 teaspoon for each pint of label rate per acre.

1. **Water.** For 87 gallons per acre (2 gallons per 1000 square feet) spray volume, use 14.4 cups (3.5 liters) of water. For other spray volumes, adjust rates accordingly. Use only water from the intended source at the source temperature.

2. **Water-dispersible products** (dry flowables, wettable powders, suspension concentrates, or suspensions) Cap the jar and invert 10 cycles.

3. **Water-soluble products.** Cap the jar and invert 10 cycles.

4. **Emulsifiable concentrates** (oil concentrate or methylated seed oil when applicable). Cap the jar and invert 10 cycles.

5. **Water-soluble additives.** Cap the jar and invert 10 cycles.

6. Let the solution stand for 15 minutes.

7. **Evaluate** the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clabbered) texture. DO NOT use any spray solution that could clog spray nozzles.
Mixing Order
Limit amount of spray mixture prepared to that needed for immediate use.

1. Water. Begin by agitating a thoroughly clean sprayer tank 1/2 full of clean water.

2. Products in PVA bags. Place the water-soluble PVA bag into the mixing tank. The water-soluble PVA bag will dissolve in water to allow the contents to disperse. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.

3. Water-dispersible products (dry flowables such as Emerald® fungicide, wettable powders, suspension concentrates, or suspo-emulsions).

5. Emulsifiable concentrates (oil concentrate or methylated seed oil when applicable).

6. Water-soluble additives (AMS or UAN when applicable).

7. Remaining quantity of water.

Maintain maximum constant agitation during application.
DO NOT allow mixture to stand for extended periods prior to application.

Cleaning Spray Equipment
Spraying equipment must be cleaned thoroughly before and after applying this product, particularly if a product with the potential to injure turfgrass was used prior to Emerald.

Restrictions and Limitations
- Maximum seasonal use rate: DO NOT apply more than a total of 1.1 ounces of Emerald per 1000 sq ft per year (48 ounces Emerald per acre per year).
- Refer to Specific Use Directions for sequential application intervals for Emerald.
- DO NOT apply this product to turfgrass except for golf course turfgrass.
- DO NOT apply through any type of irrigation equipment.
- This product cannot be used to formulate or reformulate any other pesticide product.

Specific Use Directions
Use Emerald for the control of dollar spot and bentgrass dead spot on golf course turfgrass. For maximum efficacy, Emerald should be applied prior to or in the early stages of disease development. Apply Emerald at the rates indicated in Table 1. Application Rates and Intervals for Emerald® fungicide on Golf Course Turfgrass in 2 to 4 gallons of water per 1000 square feet (87 to 174 gallons per acre). Use the shorter specified application interval and/or the higher specified rate when prolonged favorable disease conditions exist. Applications should be repeated at the specified interval as necessary.

Conditions of Sale and Warranty

The Directions For Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION ("BASF") or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use, subject to the inherent risks, referred to above.

To the extent consistent with applicable law, BASF makes no other express or implied warranty of fitness or merchantability or any other express or implied warranty.

To the extent consistent with applicable law, Buyer’s exclusive remedy and BASF’s exclusive liability, whether in contract, tort, negligence, strict liability, or otherwise, shall be limited to repayment of the purchase price of the product.

To the extent consistent with applicable law, BASF and the Seller disclaim any liability for consequential, special or indirect damages resulting from the use or handling of this product.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of BASF.
