DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

GENERAL INFORMATION
CORAGEN™ is a suspension concentration that can be applied as a foliar spray on cotton to control or suppress the important cotton insect pests listed in the table below. CORAGEN™ is mixed with water for application.

Resistance Management
For resistance management, CORAGEN® is a Group 28 Insecticide. Repeated and exclusive use of CORAGEN® or other Group 28 Insecticides may lead to the buildup of resistant strains of insects in some crops. Unless directed otherwise in the specific crop/pest sections of this label, the best practices are to follow these instructions to delay the development of insecticide resistance: Avoid using the same mode of action (same insecticide group) on consecutive generations of insect pests. Make no more than 2 applications of CORAGEN® per generation to the same insect species on a crop. Application(s) to the next generation of target pest(s) must be with an effective product with a different mode of action. Make no more than 2 successive applications within a 30 day period to the same insect species on a crop. The following application to the target pest(s) must be with an effective product with a different mode of action.

See label accompanying product for full resistance management instructions.

APPLICATION
Apply follow-up treatments of DuPont™ CORAGEN®, as specified in the table on page 2 of this label, to keep pest populations within threshold limits. Consult the cooperative extension service, professional consultants or other qualified authorities to determine appropriate threshold levels for treatment in your area. Refer to the Resistance Management section of the label accompanying product for further guidance on follow-up treatments.

Use sufficient water to obtain thorough, uniform coverage.

Do not apply more than 15.4 fl oz CORAGEN™ (0.2 lbs. a.i.) per acre per crop per season. The minimum interval between treatments is 5 days.

* Suppression only.

** For Heliothine control (cotton bollworm and/or tobacco budworm) make the first application at rates of 0.065 - 0.09 lb. ai per acre (5.0 - 7.0 oz product). Subsequent applications can be at rates of 0.045 - 0.09 lb. ai acre (3.5 - 7.0 oz product) depending on pest pressure.
