

ARSENAL[®]

herbicide
APPLICATORS CONCENTRATE

Supplemental Labeling

EPA Reg. No. 241-299

FOR THE AERIAL RELEASE TO SLASH PINE (*PINUS ELLIOTII*) STANDS OVER THE AGE OF 5 YEARS

**OBSERVE ALL PRECAUTIONARY STATEMENTS IN THE ARSENAL[®] HERBICIDE
APPLICATORS CONCENTRATE LEAFLET LABEL BEFORE USING**

DIRECTIONS FOR USE

Arsenal herbicide Applicators Concentrate may be applied as an aerial application for the release of slash pine stands, over the age of 5 years.

In addition to reading and following all directions on the **Arsenal herbicide Applicators Concentrate** label, the following precautions and restrictions are required:

- Make applications in the fall after slash pine height growth has stopped and buds have set.
- Do not apply before September 15 even if height growth has stopped and buds have set.
- A maximum of 12 to 14 oz/A of **Arsenal herbicide Applicators Concentrate** may be applied. Use the 12 oz/A rate on sandier sites.
- Do not use a surfactant.
- Do not over apply due to spray pattern overlap.
- Do not over apply by dressing up around the edges of a tract.
- Do not treat trees that are under stress. This may include stress from poor site quality including low soil nutrient availability, drought, diseases, animal or winter injury, prolonged flooding, fusiform rust or other stresses reducing vigor.

Some inhibition in height growth or terminal dieback is possible and this treatment should not be used if this cannot be tolerated.

The use of **Arsenal herbicide Applicators Concentrate** at rates less than or equal to 14 oz/A are intended for hardwood growth suppression, and some hardwood resprouting should be expected
