GENERAL INFORMATION

DoubleDown® is a liquid ammonium sulfate complex with a built in drift reduction agent to improve deposition. It is designed exclusively to increase the performance of glyphosate herbicides through:

- Controlled droplet size
- Increased retention on leaf surface
- Increased absorption into the plant's phloem through the leaf cuticle
- Decreased herbicide antagonism due to calcium ion mineralization

**Spray drift reduction is dependent on many factors including equipment setup and weather conditions. For proper management of spray drift and spray deposition, all factors, including the condition and settings of the equipment and wind speed and direction, humidity and temperature must all be taken into account.*
