DDA

CROP	PEST (Weed Suppression Only)		RATE OF APPLICATION
	Wild Rice	Ricefield Bullrush California Arrowhead Common Waterplantain	

DIRECTIONS FOR USE - DDA (Direct Dry Application) by aerial application using fixed wing aircraft only

TIMING AND METHOD OF APPLICATION

Early Post-Seeding Applications to Submerged Weeds:

DDA, without dilution in a liquid carrier, surfactant or crop oil, may be applied by air at the early post-seeding timing to wild rice. Apply Shark H2O Herbicide at 4 to 7.5 ounces per acre (0.1 to 0.19 pounds active ingredient). Make application after the floating leaf stage through tillering. Wild rice should be well rooted and vigorously growing at the time of application. Earlier applications may cause unacceptable crop response. Hold the flood water static for at least five days after application of Shark H2O Herbicide.

Applicators must attend FMC Stewardship Training, follow the loading, application and equipment calibration instructions provided by FMC Corporation. All applications must be made using a FMC approved Shark H2O Herbicide DDA metering unit; all equipment must be approved by FMC prior to applying Shark H2O Herbicide.

Apply in swath width to insure even distribution over the entire surface area of the floodwater. The recommended swath width is 50 feet, do not exceed 60 feet. Do not apply at a release height greater than 20 feet above the floodwater.

To control weeds not listed on this label, Shark H2O Herbicide may be used in-sequence with other herbicides registered for use on wild rice. Refer to the other product's label for restrictions on in-sequence-use, and observe all label precautions, instructions, and rotational cropping restrictions.

RESTRICTIONS

- Applications must be made by a Certified Applicator.
- Do not apply this product using Air Boats.
- Do not apply when conditions favoring drift exist.
- Do not apply when wind speed is greater than 10 mph. Do not apply during a temperature inversion.
- Users of Shark H2O Herbicide must hold the water on the wild rice fields for 23 days.
- Do not apply within 200 feet of sensitive crops: All broadleaf crops, tree fruits, nuts and vine crops.
- If heavy dew is present, it is recommended to delay application until sensitive plants are dry.
- Do not apply more than 12 ounces per season, including any combination use of this label and the section 3 label.
- Do not overlap application due to potential for crop phytotoxicity.
- Do not apply within 60 days of harvest.
- Observe the restricted entry interval of 12 hours.

ALL APPLICABLE DIRECTIONS, RESTRICTIONS, WORKER PROTECTION STANDARD REQUIREMENTS AND PRECAUTIONS ON THE EPA REGISTERED SHARK H2O HERBICIDE LABEL AND THE SPECIAL LOCAL NEEDS LABEL MUST BE FOLLOWED. THIS LABELING MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF PESTICIDE APPLICATION.
