GENERAL INFORMATION
Since Boron is non-mobile within the plant, a continuous supply of Liquid Boron 10% is essential throughout the growing cycle. Therefore, split or frequent applications of small amounts are most effective.

Apply according to the results of tissue and/or soil test results or contact your State Agricultural Experiment Station, Extension Specialists or Winfield Regional Plant Nutrition Specialist for appropriate use rates, crops and timing.

WARNING: Excess amounts of Boron can cause plant injury. The use of this product on any crops other than those F1683

recommended may result in serious injury to the crop(s). DO NOT OVERAPPLY! Always obtain specific Boron recommendations from your local agricultural authority before applying.

**DIRECTIONS FOR USE**

AVOID foliar applications of this product when plants are under moisture stress. Immediate post-irrigation or post-rainfall applications give best foliar uptake of nutrients. Avoid periods of high temperatures or low humidity.

ACTIVELY growing plants with young leaves absorb nutrients most effectively.

**COMPATIBILITY:** This product is compatible with most pesticides. A compatibility test is recommended if the desired combination has not been used in the past.

WITH pesticides or herbicides, ALWAYS add this product to spray tank BEFORE adding the pesticide or herbicide.

Pour recommended amount of **Liquid Boron 10%** into partly filled spray tank. Add balance of water to fill tank. Keep agitated while filling and spraying. Add compatible pesticide last.

**SOIL APPLICATION**

Apply alone, or as tank mix. Use sufficient agitation to insure proper mixing. Rates will vary from 2 to 8 quarts per acre, depending on local professional recommendation. Apply uniformly across field to prevent plant injury.

**FOLIAR APPLICATION**

Because of the nature of Boron deficiencies (growing point disorders), **Liquid Boron 10%** should be applied in multiple applications, e.g., 1-2 quarts per acre per application at 10-14 day intervals during the rapid growing and/or fruiting stage. Do not exceed 2 quarts of **Liquid Boron 10%** in any one spray application.

Application rates of **Liquid Boron 10%** are suggested for use on all crops where the application of a soluble source of Boron is necessary or would be advantageous. Specific recommendations should be made by a Certified Crop Advisor, Professional Agronomist, or Agricultural Extension Service.

**CONVENTIONAL (DILUTE) SPRAY APPLICATIONS:** Apply the required amount of this product in enough water for good coverage.

**GROUND CONCENTRATE APPLICATIONS:** Use up to 2 quarts of this product in a minimum of 25 gallons of water per acre per application.

**AIR APPLICATIONS:** Normal aerial application should not exceed 1 quart of this product per 5 gallons of water per acre per application.

**LIQUID FERTILIZER APPLICATIONS:** This product may be applied with most NPK solutions. Thoroughly mix before applying.

**IRRIGATION (DRIP, PIVOT, SPRINKLER, OVERHEAD AND SOLID SET):** The required amount of this product should be applied over the growing season of the crop via multiple applications 1-2 weeks apart. This product may be mixed with most liquid fertilizers or pesticides before injection. Use a back-flow check valve to prevent material from back siphoning into water system.
