DEVOUR™

DEFOLIANT AND DESICCANT HERBICIDE FOR THE CONTROL OF WEEDS AND GRASSES AND AS A HARVEST AID

NEVER PUT INTO FOOD, DRINK OR OTHER CONTAINERS.

IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID.

SYMPTOMS ARE PROLONGED AND PAINFUL.

DO NOT USE OR STORE IN OR AROUND THE HOME.

DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE.

THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.

ACTIVE INGREDIENT: Paraquat dichloride (1,1’-dimethyl-4,4’-bipyridinium dichloride) ..................................................... 43.2%

OTHER INGREDIENTS: ...................................................................................................................... 56.8%

TOTAL: ........................................................................................................................................ 100.00%

Contains 3.0 pounds paraquat cation per gallon as 4.14 pounds of dichloride salt per gallon.

Contains emetic and stench (odor).

KEEP OUT OF REACH OF CHILDREN

DANGER / PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.

(If you DO NOT understand the label, find someone to explain it to you in detail.)

EPA Reg. No.: 89167-24-89391

Distributed By:
INNVICTIS CROP CARE, LLC™
4850 Hahns Peak Drive, Suite 200
Loveland, CO 80538
FIRST AID
Contains Paraquat, a Bipyridinium Herbicide. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

If Swallowed
• Call a poison control center or doctor IMMEDIATELY for treatment advice.
• SPEED IS ESSENTIAL. Immediate medical attention is required. If available, give an absorbent such as activated charcoal, bentonite or Fuller’s Earth.
• Have person sip a glass of water if able to swallow.
• DO NOT induce vomiting unless told to by a poison control center or doctor.
• DO NOT give anything by mouth to an unconscious person.

If Inhaled
• Move person to fresh air.
• The odor of this product is from the stanching agent, which has been added, not from the paraquat.
• If person is not breathing, call 911 or an ambulance. Call a poison control center or doctor for treatment advice.

If In Eyes
• Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If On Skin Or Clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN
Administer either activated charcoal (100g for adults or 2g/kg body weight in children) or Fuller’s Earth (15% solution; 1 liter for adults or 15ml/kg body weight in children). NOTE: The use of gastric lavage without administration of an absorbent has not shown any clinical benefit. DO NOT use supplemental oxygen. Eye splashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulceration, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat; however, contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.

HOT LINE NUMBERS: TRANSPORTATION EMERGENCY (CHEMTREC) 800-424-9300

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DANGER / PELIGRO

May be fatal if swallowed. Fatal if inhaled. Corrosive. Causes irreversible eye damage. Wear protective eyewear. DO NOT breathe spray mist. Wear a dust mist respirator. DO NOT get in eyes or on clothing. Harmful if absorbed through skin. Avoid contact with skin. Prolonged or frequently repeated contact may cause allergic reactions in some individuals.

IMPORTANT: Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers (other than mixers and loaders) must wear:
• Long-sleeved shirt and long pants
• Chemical resistant gloves – Category A (e.g. barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton.
• Shoes plus socks
• Protective eyewear
• NIOSH-approved particulate filtering respirator equipped with N, R, or P class filter media.

Mixers and loaders must wear:
• Long-sleeved shirts and long pants
• Chemical resistant gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton)
• Shoes plus socks
• Chemical resistant apron
• Face shield
• NIOSH-approved particulate filtering respirator equipped with N, R or P class filter media.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. DO NOT reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENT

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users Should:
• Wash hands before eating, drinking, and chewing gum, using tobacco or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product.
• Wash the outside of gloves before removing.
• As soon as possible, wash thoroughly and change into clean clothing.
ENVIRONMENTAL HAZARDS
This product is toxic to wildlife. DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when cleaning equipment or disposing of equipment wash water.
Paraquat dichloride is toxic to nontarget crops and plants if off-target movement occurs because it desiccates all green plant tissue. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Refer to the local state laws, regulations, guidelines, and spray drift information contained in the ‘Directions for Use’ section for proper application to avoid off-target movement. DO NOT apply under conditions unfit for sale, use, or consumption. DO NOT apply when weather conditions favor drift from treated areas. To avoid drift, DO NOT make aerial application during periods of thermal inversion.

PHYSICAL AND CHEMICAL HAZARDS
This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustible gas mixture. DO NOT mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. The product is compatible with high density polyethylene and rubber-lined steel containers.

DIRECTIONS FOR USE
Restrict Use Pesticide: It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or Tribe, consult the agency responsible for pesticide regulation. DO NOT use around home gardens, schools, recreational parks, golf courses or playgrounds.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to use of this product that are covered by the Worker Protection Standard.

For chemical fallow, early postemergence broadcast in peanuts and dormant season applications, and “between cutting” applications in alfalfa: DO NOT enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

For harvest aid and desiccation, preplant or preemergence (broadcast or banded), and postemergence directed spray: DO NOT enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
• Coveralls,
• Chemical resistant gloves – Category A (e.g. barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton),
• Shoes plus socks, and
• Protective eyewear

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

DO NOT enter or allow others to enter the treated area until sprays have dried.
AVOID working in spray mist. Keep all unprotected persons out of operating areas or vicinity where there may be danger of drift. Certain states may require more restrictive reentry intervals; consult your State Department of Agriculture for further information.

PRODUCT INSTRUCTIONS AND INFORMATION
DO NOT apply this product through any type of irrigation system.
When DEVOUR is applied at less than 10 gallons per acre finished spray volume, a drift control or spray deposition additive SHOULD be used. Refer to the additive label for rates of applications, directions for use, limitations, and restrictions.

SPRAY DRIFT INFORMATION
AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment- and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.
The following DRIFT MANAGEMENT REQUIREMENTS must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements DO NOT apply to forestry applications, public health uses or to applications using dry formulations.
1. The distance of the outer most nozzles on the boom must not exceed ¾ the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45°. Where states have more stringent regulations, they shall be observed.
The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information. Where states have more stringent regulations, they must be observed.
AERIAL DRIFT REDUCTION ADVISORY INFORMATION

Information on Droplet Size
The most effective way to reduce drift potential is to apply large droplets. The best management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environment conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

Controlling Droplet Size
- Volume – Use high flow rate nozzles to apply the highest spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure – **DO NOT** exceed the nozzle manufacturer’s recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of Nozzles – Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type – Use a nozzle that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

Boom Length
For some use patterns, reducing the effective boom length to less than ¾ of the wingspan or rotor length may further reduce drift without reducing swatch width.

Application Height
Applications must not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making application at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swatch adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

Wind
Drift potential is lowest between wind speeds of 2-10 MPH. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application must be avoided below 2 MPH due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator must be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity
When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions
Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversion are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas
The pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

PRODUCT INFORMATION

**DEVOUR** is a liquid formulation containing 3 lbs. of active ingredient per gallon. It contains a nontoxic odor to help prevent accidental ingestions. It also contains an emetic (an agent which will induce vomiting if the product is swallowed).

APPLICATION

**DEVOUR** is a contact herbicide for control or suppression of a broad spectrum of emerged weeds including most small annual broadleaf and grass weeds. It can also be used to suppress perennial weeds by destroying green foliage and as a desiccant/defoliant at harvest. Complete coverage of target weeds is necessary to get good control because **DEVOUR** is a contact-type herbicide. It is also necessary to obtain complete coverage for good crop desiccation and defoliations. Undesirable weed control and undesirable crop desiccation/defoliation will result if improper application technique and/or application to large, stressed, or mown weeds are made. Refer to the following details for specific application instructions.

Thorough coverage of all green foliage is required for efficacious weed control and crop defoliation and desiccation because **DEVOUR** requires actively growing green plant tissue to function. Drought-stressed weeds, weeds with little green foliage (i.e., mowed or cut weeds), or mature woody bark of trees and vines are unaffected by application with **DEVOUR**. There is no residual soil activity to affect later planted crops or later germinating weeds because clay and organic matter rapidly tie up **DEVOUR**.

After the last application **DEVOUR**, all rotational crops may be planted immediately.

ROTATIONAL CROPS

Rain occurring 30 minutes or more after application will have no effect on the activity of **DEVOUR** because it is rapidly absorbed by the weed foliage.

USE OF A NONIONIC SURFACTANT OR CROP OIL CONCENTRATE

The following should always be added and be used at the listed rates or there will be a reduction in efficacy of **DEVOUR**.

**Nonionic Surfactant**: Either add a nonionic surfactant cleared for the current use containing 50-74% surface-action agent at 0.25% v/v (2 pts./1 00 gals.), or add nonionic surfactant containing 75% or more surface-active agent at 0.125% v/v (1 pt./100 gals.), of the finished spray volume for ground applications. Add a nonionic surfactant at 0.25% v/v (2 pts./1 00 gals.) of the finished spray volume for aerial applications.
Crop Oil Concentrate: For ground applications, add a non-phytotoxic crop oil concentrate cleared for the current use that contains 15-20% approved emulsifier, with 1.0% v/v (1 gal./100 gals.) of the finished spray volume. Add 1 pt. of crop oil concentrate per acre for aerial applications. For cotton harvest aid, **DO NOT** use crop oil concentrate when using DEVOUR.

**NOZZLE SELECTION**

The use of flat-fan nozzles is the most effective application of DEVOUR. The use of flood nozzles may result in a reduction of weed control due to inadequate coverage because they produce large uneven droplets.

Use only flat fan nozzles when spraying less than 20 gallons of spray carrier per acre using the following table.

**Recommended Nozzle Type and Spray Pressures and Setup**

<table>
<thead>
<tr>
<th>NOZZLE TYPE</th>
<th>FLAT FAN</th>
<th>FLOOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum Size</td>
<td>8</td>
<td>15</td>
</tr>
<tr>
<td>Spray Pressure (at nozzle)</td>
<td>30-50 psi</td>
<td>30-50 psi</td>
</tr>
<tr>
<td>Maximum Nozzle Spacing</td>
<td>30°</td>
<td>40°</td>
</tr>
<tr>
<td>Direction of Spray Pattern</td>
<td>Down</td>
<td>Down</td>
</tr>
<tr>
<td>Maximum Speed</td>
<td>10mph</td>
<td>10mph</td>
</tr>
<tr>
<td>Spray Overlap (at each edge)</td>
<td>30%</td>
<td>50%</td>
</tr>
</tbody>
</table>

Reduced control will result if nozzles, pressures, or setups differ from the above chart.

**SPRAY CARRIER**

DEVOUR may be inactivated by muddy water, or suspension-type fertilizers containing clay. Therefore, always use clean water (free of mud or clay), clear liquid nitrogen, or complete clear liquid fertilizers as the carrier when spraying this product. Never use suspension-type fertilizers containing clay as the spray carrier. Always use the higher specified rate of DEVOUR and surfactant if using a complete clear liquid fertilizer containing high phosphate levels as the spray carrier.

Note: It is important that when using liquid fertilizers such as 28% N as a spray carrier, that nonionic surfactant still be used with DEVOUR. The use of liquid fertilizer carriers are not substitutes for surfactants.

**RATES OF DEVOUR**

With each use, follow rates listed in the following tables. When weeds are larger or are dense, use the higher label rates. For use as a harvest aid, use higher specified rate when crop vegetation is dense. **DO NOT** exceed 0.50 lbs. a.i./A in a minimum of 30 gallons of spray for broadcast applications with backpack sprayers.

**SPRAY VOLUME**

With each use, follow rates listed in the following tables. Spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage, because the volumes listed are minimum volumes only.

**TARGET WEEDS SHOULD NOT EXCEED SIX INCHES IN HEIGHT WHEN SPRAYING LESS THAN 20 GALLONS OF SPRAY CARRIER PER ACRE.**

**APPLICATION TIMING**

Applications should be made to small emerged weeds. Larger weeds more than 6 inches in height may be more difficult to control than weeds 1-6 inches in height. If possible, when green foliage is removed either from grazing or mowing, allow the weeds to grow 2-4 inches in height. Also, during harvesting forage or grain crops before spraying, weeds present in the field are also cut. Therefore, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height, allowing sufficient green foliage to remain for applications.

**BURNDOWN OF GRASS COVER CROPS OR VOLUNTEER CEREALS**

The best results occur for control of grass cover crops or volunteer cereals when DEVOUR is applied prior to tillering or after boot stage, especially with a wheat cover crop or volunteer wheat. Complete control may not be achieved with treatments made between tillering and boot stage. Complete control of perennial cover crops should not be expected.

**ENVIRONMENTAL CONDITIONS**

This product is active over a wide range of environmental conditions such as cool (below 55°F), cloudy or overcast weather. However these conditions will slow the activity of DEVOUR.

**SPOT SPRAYING**

Refer to the following table if only small areas are to be sprayed with labeled applications.

**MIXING INSTRUCTIONS FOR SMALL QUANTITIES FOR SPOT SPRAYING**

<table>
<thead>
<tr>
<th>If the Broadcast Rate per Acre for DEVOUR is:</th>
<th>Add The Following Amount of DEVOUR to 1 Gallon of Water</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 ½ pts.</td>
<td>1/3 fl. oz.</td>
</tr>
<tr>
<td>2 pts.</td>
<td>3/8 fl. oz.</td>
</tr>
<tr>
<td>2 ½ pts.</td>
<td>1/2 fl. oz.</td>
</tr>
<tr>
<td>3 pts.</td>
<td>2/3 fl. oz.</td>
</tr>
</tbody>
</table>

Add 1/3 -1/2 fl. oz. of a nonionic surfactant for each gallon of spray at all times. Thoroughly wet the foliage, but not to the point of runoff when spot spraying in this manner.
TANK MIXING: ENHANCED BURNDOWN OF DIFFICULT-TO-CONTROL WEEDS AND FOR RESIDUAL WEED CONTROL

Photosynthetic Inhibitor Herbicides

To control difficult weeds, tank mix **DEVOUR** with other herbicides. The addition of other photosynthetic inhibitors (PSI) herbicides will slow the activity of **DEVOUR**. This allows **DEVOUR** to thoroughly distribute throughout a treated leaf, thus achieving better control than if **DEVOUR** was applied alone.

**DEVOUR** may be applied in tank mixture with the following PSI herbicides:

<table>
<thead>
<tr>
<th>AAtrex® Herbicide</th>
<th>Bicep MAGNUM® Herbicide</th>
<th>Linex® Herbicide</th>
</tr>
</thead>
<tbody>
<tr>
<td>Atrazine Herbicide</td>
<td>Canopy® Herbicide</td>
<td>Lorox® Herbicide</td>
</tr>
<tr>
<td>Bicep Lite II</td>
<td>Lariat® Herbicide</td>
<td>Princep® Herbicide</td>
</tr>
<tr>
<td>MAGNUM® Herbicide</td>
<td>Lexone® Herbicide</td>
<td>Sencor® Herbicide</td>
</tr>
</tbody>
</table>

Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.

Improved Weed Control with PSI’s

The addition of a PSI herbicide will help improve the control of difficult weeds listed below. Make a second application for best results.

| Barnyardgrass | Kochia | Prickly lettuce |
|----------------|------------------|
| Broadleaf signal grass | Lambsquarters | Sedges |
| Cheatgrass | Malva (cheeseweed) | Tansymustard |
| Cocklebur | Marestail | Velvetleaf |
| Fall panicum | Morningglory | Volunteer wheat |
| Giant ragweed | Pennsylvania smartweed |  |
| Knotweed | Perennial weeds (suppression only) |  |

Improved Control of Perennial and Annual Broadleaf Weeds

Tank mixing with labeled 2,4-D ester (Low Volatile), 2,4-DB or Banvel® herbicide will help improve control when perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc., or difficult to control annual broadleaf weeds such as giant ragweed or morningglory are present. Reduced grass control may be achieved when tank mixing the amine formulation of 2,4-D with **DEVOUR**.

**ORDER OF TANK MIXING**

It is advisable to tank mix **DEVOUR** and other listed products as follows:

1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer.
2. Begin tank agitation and continue throughout mixing and spraying.
3. Add dry formulations (WP, DF, etc.) to tank.
4. Add liquid formulations (SC, EC, L, etc.) to tank.
5. Add **DEVOUR** to tank.
6. Add nonionic surfactant to tank.
7. Fill remainder of spray tank.

Always read other pesticide products labels for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

It is advisable to perform a jar test to check physical compatibility when using different formulation of the herbicides listed on this label.

**PRODUCT PRECAUTIONS AND RESTRICTIONS**

**EQUIPMENT**

**DEVOUR** is corrosive to aluminum. Thoroughly flush all aluminum spray equipment and aluminum aircraft structures that are exposed to spray solution or spray drift with water immediately after use. The activity of **DEVOUR** may be reduced in dry areas where dust stirred up by high winds or equipment tires can coat weed or plant leaves. Therefore, avoid applications in extremely dusty conditions.

**LIMITATIONS AND PRECAUTIONS**

- Unless otherwise indicated, **DEVOUR** will severely injure or kill crop plants emerged at time of application if they come in contact with sprays.
- **DO NOT** pasture livestock in treated fields or feed treated foliage in cotton when this product is used as a cotton harvest aid.
- **DO NOT** use around home gardens, schools, recreational parks, or playgrounds.
- **DO NOT** apply to soils lacking clay minerals such as peat, muck, pure sand, artificial planting media for preplant and preemergence (to the crop) uses.
- To enable maximum weed and grass emergence prior to treatment, seedbeds and plantbeds should be formed as far ahead of planting and treatment as possible.
- Avoid disturbing soil when seeding or transplanting.
- Transplanted plants may become damage when they come in contact with plastic mulch used for preplant weed control and that has been treated with this product. To prevent damage to the crop, sufficient wash-off such as rainfall or sprinkler irrigation prior to planting may be needed.
- **DEVOUR** will be ineffective in controlling or suppressing weeds and grasses that have emerged after application.

</tbody>
</table>

### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than one application per year.
- Applications should be made during late winter or early spring.
- **DO NOT** cut or harvest within 70 days after application.
- Alfalfa foliage present at time of application will be burned.
- Replanting may be needed due to the reduction of seedling stands.
- **DO NOT** apply to seedling alfalfa grown for seed.

<table>

<td>Broadcast</td>
<td>1.3 - 2.0 pts.</td>
<td>Ground: 10 gals. Air: 5 gals.</td>
<td>42</td>
</tr>
</tbody>
</table>

### Precautions, Restrictions and Directions
- **DO NOT** make more than one application per year.
- Fall Regrowth: **DO NOT** apply if last cutting is greater than 6”.
- Spring regrowth: **DO NOT** apply if last cutting is greater than 2”.
- After the crop is dormant, apply to well-established stands that are at least 1-year old.
- Yield of first cutting may be reduced because alfalfa foliage present at the time of application will be burned.
- **DO NOT** cut or harvest within 42 days after application.
- For improved and longer-lasting weed control, tank mix with metribuzin (Lexone or Sencor). Always refer to metribuzin label for weeds controlled, rates of applications, directions for use, limitations and restrictions.

<table>

<td>Broadcast</td>
<td>0.7 - 1.3 pts.</td>
<td>Ground: 10 gals. Air: 5 gals.</td>
<td>42</td>
</tr>
</tbody>
</table>
### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than one application per year.
- When weeds are less than 4 inches tall apply at 0.7 pt. rate **DEVOUR**
- Mix **DEVOUR** with 1-2 qts. of Velpar L per acre.
- Use lower rate of Velpar L on loamy sands, or sandy loams. Always refer to the Velpar L label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.
- During the dormant season, make one application to established alfalfa stands.
- **Fall Re-growth:** **DO NOT** apply if last cutting is greater than 6”.
- **Spring Re-growth:** **DO NOT** apply if last cutting is greater than 2”.
- **DO NOT** apply to alfalfa during the first season after seeding.
- Temporary chlorosis may occur on alfalfa re-growth.
- Increased chances of crop injury may occur if stress which may be caused in part by low fertility, disease, insects, over cutting, drought or frost.
- **DO NOT USE** on gravelly or rocky soils, exposed subsoils, hardpan, sand or poorly drained alkaline soils as crop injury, including mortality, may result.
- **DO NOT** cut or harvest within 42 days after application.

### CROP \ WEEDS \ USE PATTERN \ DEVOUR RATE PER ACRE \ MINIMUM TOTAL SPRAY PER ACRE \ GRAZING OR PRE HARVEST INTERVAL (DAYS)

<table>

<td></td>
<td>Broadcast</td>
<td>0.7 pt.</td>
<td>Ground: 10 gals.</td>
<td>30</td>
</tr>
</tbody>
</table>

### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than one application per year.
- Applications should be made before first spring cutting and during late fall or winter months after the last fall cutting.
- **California:** **DO NOT** apply if spring regrowth after grazing or cutting is more than 2 inches in Orange and Riverside counties and all counties north of these counties.
- **DO NOT** harvest within 60 days of application.
- **Applications** to alfalfa that is not dormant, or has broken dormancy, may result in stand and/or yield reductions. Replanting may be necessary. Green alfalfa foliage present at time of application will be burned.
- If there is a severe weed infestation, total hay yield of first cutting may be reduced in alfalfa fields and the reduction is typically directly proportionate to the loss of weed weight.
- For improved and residual weed control in dormant established (at least 1-year-old) alfalfa, tank mix with metribuzin (Lexone or Sencor). **DO NOT** apply tank mix with metribuzin on alfalfa that is less than 1-year-old.
- Always refer to metribuzin label for weeds controlled, rates of applications, directions for use, limitations and restrictions.
- **California:** If ryegrass, shepherdsparse, sowthistle or groundsel are present, use higher specified rate.
Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Control of weeds beyond the seedling stage and weed stubble cut off during harvest are less affected by this treatment.
- Make applications immediately after alfalfa has been removed for hay or silage.
- **DO NOT** treat more than 5 days after cutting.
- A reduction in first year alfalfa stands and yields may occur if alfalfa is allowed to regrow more than 2 inches.
- Burning of alfalfa foliage will occur at time of application.
- Weed control may be reduced where moisture is limited such as in arid climates.
- **DO NOT** cut or harvest within 30 days of application.
- Apply as needed up to three times during the growing season in addition to a dormant application.
- **DO NOT** make more than 2 applications during the first growing season of first-year alfalfa.

---

Table 2. ALFALFA: New Seedlings - Suppression and control of broad leaf weeds and grasses in new alfalfa seedlings grown for hay (California only).

**CROP** | **USE PATTERN** | **DEVOUR RATE PER ACRE** | **MINIMUM TOTAL SPRAY PER ACRE** | **GRAZING OR PREHARVEST INTERVAL (DAYS)**
--- | --- | --- | --- | ---
ALMONDS | Directed Spray | 0.8 - 2.7 pts. | Ground: 10 gals. | -

Additional Precautions/ Restrictions, and Directions

- **DO NOT** make more than 5 applications per year.
- Avoid allowing spray to contact green stems (except suckers) or foliage.
- When spraying around young trees, use a shield or wrap plant.
- **DO NOT** graze treated areas and **DO NOT** feed cover crops grown in treated areas to livestock.
- **DO NOT** apply when nuts to be harvested are on the ground.
- Retreatment or spot treatments may be necessary for mature woody weeds, perennial weeds, late germinating weeds and green suckers.

---

**CROP** | **USE PATTERN** | **DEVOUR RATE PER ACRE** | **MINIMUM TOTAL SPRAY PER ACRE** | **GRAZING OR PREHARVEST INTERVAL (DAYS)**
--- | --- | --- | --- | ---
ARTICHOKE (GLOBE) | Directed Spray | 1.7 - 2.7 pts. | Ground: 20 - 100 gals. | 1

Additional Precautions/ Restrictions, and Directions

- **DO NOT** make more than 3 applications per year.
- **DO NOT** exceed 8 pts. per season.
- Applications must be made at least 7 days apart.
- **DO NOT** harvest within 24 hours of last application.
### Additional Precautions/ Restrictions, and Directions
- **DO NOT** make more than 3 applications per year.
- Application should be made prior to emergence of the crop.
- Emerged asparagus at time of application will be killed.

### Additional Precautions/ Restrictions, and Directions
- **DO NOT** make more than 3 applications per year.
- Application should be made prior to emergence of the crop or after last harvest.
- Emerged asparagus at time of application will be killed.

### Additional Precautions/ Restrictions, and Directions
- **DO NOT** make more than 2 applications per year.
- Add nonionic spreader at 1 qt./100 gals. of spray mix.
- Use a single application of the higher specified rate for vining type beans or bush type with lush growth.
- May also be applied as a split application and improve vine coverage. However **DO NOT** make more than 2 applications per year or exceed a total of 1.3 pints per acre.
- Apply when at least 80% of the pods are yellowing and mostly ripe and when leaves are no more than 40% of bush type peas or beans or 30% of vine type peas or beans are green.
- **DO NOT** apply when weather conditions favor spray drift. To reduce drift, a drift control agent may be included.
- Not registered for use in dry beans and dry peas in California.
Blackberries, Blueberries, Boysenberries, Currant, Elderberries, Gooseberries, Huckleberries, Loganberries, Raspberries

**Additional Precautions/ Restrictions, and Directions**
- **DO NOT** make more than 5 applications per year.
- New canes or shoots can be injured. Therefore, apply before their emergence.
- To prevent crop injury from spray mist, apply as a coarse spray.

</table>

**Additional Precautions/ Restrictions, and Directions**
- Cassavas and Taniers: **DO NOT** make more than 3 applications per year.
- Yams: **DO NOT** make more than 2 applications per year.
- Make applications when weeds are succulent and growth is 1-6”.
- Prevent spray from contacting crop to prevent injury to crop.
- **DO NOT** spray under windy conditions.
- **DO NOT** graze treated areas or feed treated forage to livestock.

**PRODUCT INFORMATION FOR CHEMICAL FALLOW**
- As the density of stubble, crop residue or weeds increases, use higher spray volumes for better coverage.
- To control volunteer wheat or downy brome, fall-applied treatments generally work best with **DEVOUR**. If possible, tank mix with atrazine for maximum burndown and residual control.
- Apply from immediately after harvest up to emergence of the newly seeded crop as a broadcast or band treatment.
- Before applying **DEVOUR**, cut wheat as high as possible to avoid cutting weeds too short, and allow the weeds to grow at least 2-3” after harvest.
- The addition of dicamba (Banvel) or 2,4-D ester (Low Volatile) may aid in the suppression of emerged perennial broadleaf weeds and large annual broadleaf weeds.
- Always refer to the product label(s) for 2,4-D ester (Low Volatile), Banvel, or residual herbicide for rates of applications, directions for use, limitations, and restrictions.
- It is permissible to tank mix with registered residual herbicide combinations other than listed for extended weed control during the fallow period.
- Weeds and grasses emerging after application and weeds taller than 6 inches will not be controlled.
- Crop plants emerged at the time of application will be killed.
- The minimum total spray per acre allowed is 5 gallons for ground and 5 gallons for air applications.
- **When applying at less than 10 GP A by ground:**
  - **DO NOT** apply with floaters or exceed a speed of 10 mph.
  - Apply with flat fan nozzles at 30-40 psi.
  - Apply only in a tank mix with atrazine at a minimum of 0.5 lb. a.i./acre.
  - By air: apply in 5-10 gallons of spray mix per acre.

<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Weeds 6&quot;: 2.0-2.7 pts.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- Spray before weeds produce seeds.
- Control of volunteer wheat and downy brome control increases when applications are made late August or early September.
- For improved burndown and residual control of weeds, tank mix with Atrazine, Marksman® Herbicide, or Command® Herbicide.
- For improved burndown and residual control of grass and broadleaf weed tank mix with metribuzin (Sencor 75DF).
- Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and to the section “Product Information for Chemical Fallow”.

<td></td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- To conserve moisture, application should be made March 1 to April 15, prior to spring rains.
- Even though moisture loss is greater when applications are made after the boot stage, volunteer wheat is easier to control after this stage.
- For volunteer wheat or downy brome control in spring, use at least 1.3 pts. of DEVOUR per acre with a Photosynthetic Inhibitor Herbicide.
- Refer to the section “Product Information for Chemical Fallow”.
- For burn down and residual control of grass and broadleaf weeds, tank mix with metribuzin, (Sencor 75DF/Lexone).
- Always refer to the label for metribuzin (Sencor 75DF/Lexone) for rates of applications, directions for use, limitations, and restrictions.

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- For improved burndown and residual weed control, tank mix with Atrazine or Marksman. Always refer to the respective product label(s) for rates of applications, directions for use, limitations and restrictions.
- Make applications after wheat harvest and before weeds produce seed.
- If grasses such as foxtails or barnyardgrass recover, respray before seed production.
- Applications made late August to November help control volunteer wheat and downy brome.
- Refer to the section “Product Information for Chemical Fallow”.

</tr>
</tbody>
</table>

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 1 application per year.
- Applications should be made during late fall or winter months after the last cutting and before first spring cutting.
- **DO NOT** apply if regrowth after grazing or cutting is more than 2”.
- **DO NOT** harvest within 60 days of application.
- **CAUTION:** Stand and/or yield reductions may occur when applications are made to clover or other legumes that are not dormant, or have broken dormancy. Therefore, it may be necessary to replant. Burning will occur to green clover or other legumes’ foliage present at the time of application.
- Discoloration and temporary stunting will occur in clover or other legumes foliage present at the time of application.
- If there is severe weed infestation, the total hay yield of first cutting may be reduced in clover or other legumes fields and is usually directly proportionate to the loss of weed weight.
- In California: If rye grass, shepherdspurse, sowthistle or groundsel are present, use higher specified rate.

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Applications should be made when weeds are actively growing.
- Use the higher specified rate on larger or hard to control weeds. Weeds 6” or taller may not be controlled.
- Severe damage and/or complete kill can occur if spray contacts corn plants.
- For Hooded Or Shielded Sprayers:
  - Use a hooded or shielded sprayer with skids or wheels on the spray boom to maintain spray height in order to prevent excessive crop phytotoxicity.
  - Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants.
- For Directed Spray Without Hooded Or Shielded Sprayers:
  - Corn height is measured from soil surface to top of whorl.
  - Apply when corn is at least 10” tall with nozzles arranged to spray no higher than the lower 3” of corn stalks.
  - Corn plants shorter than 10” may be injured and not recover.
  - For corn more than 20” tall: Arrange the nozzles to spray no higher than the lower 1/3 of the corn stalks.
  - Injury to corn foliage will occur if sprayed. However, corn will recover and develop normally.

</tbody>
</table>

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than one application per year. Make ONE (1) application at least 7 days prior to harvest.
- Apply after the corn is mature. This is indicated by a black layer which forms at the base of the kernels. You may consult your local agricultural authority for help in identifying the black layer.
- Add nonionic surfactant containing at least 75% surface active ingredient at 0.25% v/v.
- To desiccate mature broadleaf weeds and grasses or broadleaf weeds and grasses that are taller than 18”, use 1.3 pts.
- Drought stressed plants, especially broadleaf weeds, can be difficult to kill, and desiccation may not be complete.

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 4 applications per year.
- **DEVOUR** may be tank mixed with the following products to aid in defoliation and opening of mature bolls: Accelerate® Defoliant, Def® Defoliant, Dropp® Defoliant, Ethephon Plant Growth Regulator, Folex® Defoliant, Harvade® Harvest Growth Regulator, Prep™ PGR
- Apply when 60% or more of the bolls are open and the remaining bolls to be harvested are mature.
- Development of immature bolls will be inhibited.
- Always refer to tank mix product label(s) for rates of applications, directions for use, limitations, and restrictions.

<table>

</table>
| SOUTHERN COTTON      | Post Defoliation - To aid in opening of mature bolls and to desiccate green weeds | Broadcast | 0.7 - 1.3 pts. | Ground: 10 gals  
Air: 5 gals | 3 |

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 4 applications per year.
- If weed infestation is heavy or dense, use the higher specified rate.
- Apply when 75% or more of bolls are open and remaining bolls to be harvested are mature.
- Development of immature bolls will be inhibited.
- After a defoliation or conditioning application has been made, delay desiccation application of **DEVOUR** approximately 3-7 days to minimize leaf sticking.

<table>
<thead>
<tr>
<th>CROP</th>

| WESTERN COTTON       | Harvest aid for boll opening and early defoliation | Broadcast | 3.7 - 5.4 fl. oz.  
+ Phosphate or sodium chlorate; and/or other compatible harvest aid products | Ground: 10 gals  
Air: 5 gals | 7 |

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 4 applications per year.
- On rank cotton, use higher specified rate.
- **DO NOT** use more than 5.4 fl. oz. of **DEVOUR** for early defoliation as excessive desiccation may occur.
- Early defoliation timing is when 60% or more of the bolls are open and remaining bolls to be harvested are mature (approximately 4 NACB).
- Development of immature bolls will be inhibited.
- **DO NOT** use more than 4.0 lbs. of actual sodium chlorate defoliant per acre at this early defoliation timing.
- Always refer to tank mix product label(s) for rates of applications, directions for use, limitations, and restrictions.

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>

| COTTON               | Stripper or Spindle Harvested Harvest aid for defoliation and boll opening | Broadcast | 2.1 - 7.5 fl. oz. | Ground: 10 gals  
Air: 5 gals | 3 |

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 4 applications per year.
- **BECAUSE OF EXTREMES IN ENVIRONMENTAL AND PLANT CONDITIONS, IT IS ADVISABLE TO APPLY THE RANGE OF RATES ON A SMALL BLOCK OF COTTON TO DETERMINE THE RATE THAT BEST FITS YOUR NEEDS.
- Apply when 75% of the bolls are open and remaining bolls to be harvested are mature.
- **DEVELOPMENT OF IMMATURE BOLLS WILL BE INHIBITED, SLICE BOLLS AND INSPECT THE SEED FOR MATURITY.
- **DEVOUR** may be applied alone or tank mixed with the following cotton harvest aids:
  - Accelerate Defoliant®, Def Defoliant®, Dropp Defoliant®, Ethephon® Plant Growth Regulator, Folex Defoliant®, Harvade® Harvest Growth Regulator Prep™ PGR
  - May be applied as a split application. **DO NOT** exceed a total of 1.3 pts./A.
  - To avoid leaf sticking, apply **DEVOUR** as a desiccant approximately 3-7 days after defoliant or a conditioning application and 7-14 days before harvest.
  - Cooler temperatures may cause a longer waiting period between application of PARAQUAT CONCENTRATE as a desiccant and defoliation/conditioner.
  - South of Interstate-10 in Texas, where temperatures are typically higher during defoliation, lower rates in the specified range may be necessary.
  - Always refer to tank mix product label(s) for rates of applications, directions for use, limitations, and restrictions.
### Cotton Late season desiccation

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>

<tbody>
<tr>
<td>Cotton Late season desiccation</td>
<td>Broadcast</td>
<td>0.7 - 1.3 pts.</td>
<td>Ground: 10 gals. Air: 5 gals.</td>
<td>3</td>
</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 4 applications per year.
- **BECAUSE OF EXTREMES IN ENVIRONMENTAL AND PLANT CONDITIONS, IT IS ADVISABLE TO APPLY THE RANGE OF RATES ON A SMALL BLOCK TO DETERMINE THE RATE THAT BEST FITS YOUR NEEDS.
- May be applied as a split application. **DO NOT** exceed a total of 1.3 pts./A.
- Apply when 85% of the bolls are open and the remaining bolls to be harvested are mature (approximately 0 NACB).
- Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity.
- South of Interstate-10 in Texas, where temperatures are typically higher during defoliation, lower rates in the range may be necessary.
- Delay desiccation application of **DEVOUR** approximately 3-7 days to minimize leaf sticking if a defoliation or conditioning application has been made.
- May be tank mixed with other harvest aid materials known to the local expert to be effective.

### Cotton Desiccation of Regrowth

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>

<td>Cotton Desiccation of Regrowth</td>
<td>Broadcast</td>
<td>0.75 - 1.25 pts.</td>
<td>Ground: 10 gals. Air: 5 gals.</td>
<td>3</td>
</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 4 applications per year.
- Use to desiccate regrowth occurring after defoliation or desiccation.
- **BECAUSE REGROWTH IS DIFFICULT TO CONTROL, THOROUGH COVERAGE WITH THE FULL LISTED RATE IS NECESSARY.**
- Control is dependent on growing conditions and desiccation of small new regrowth may not always be complete.
- If regrowth is excessive, use higher specified rate.

### Easter Lilies (Field grown)

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Easter Lilies (Field grown)</td>
<td>Preemergence</td>
<td>1.7 - 2.7 pts.</td>
<td>Ground: 10 gals</td>
<td>-</td>
</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions
- **DO NOT** exceed two applications per year.

### Fallow Land

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fallow Land</td>
<td>Preplant Broadcast to Fallow</td>
<td>1.0 - 2.7 pts</td>
<td>Ground: 10 gals Air: 5 gals</td>
<td>-</td>
</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions
- **DO NOT** apply more than 2 applications during the fallow period.
- Fallow land may be between operations such as disking, ripping, plowing, leveling, irrigating or listing for ground preparation purposes.
- Use for the control of weeds such as bluegrass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dog fennel, tansy mustard, London rocket, sowthistle, rescue brome, wild oats, volunteer cereals and other winter annuals and for the suppression of perennial weeds or sedges. For weeds approaching the maximum size of 6”, the higher specified rate may be used.
- Prior to application allow maximum weed emergence to maximize the benefit of this use.
- Adhere to the preharvest intervals and other crop specific restrictions for planted crops elsewhere on this label.

### Grasses (For seed) (For use in seedbed preparation)

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>

<td>Preplant, planting, or preemergence</td>
<td>1.3 - 2.7 pts</td>
<td>Ground: 10 gals</td>
<td>-</td>
</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- Prepare the seedbeds and allow weeds to germinate.
- Apply **DEVOUR** when weeds are at the 3-5 leaf stage.
- Applications may be repeated as necessary (but only up to 3 applications per year) prior to grass emergence.
- **DO NOT** graze treated areas or use the seed or straw from treated areas for animal feed or bedding.
<table>

<td>Dormant Season</td>
<td>1.3 - 2.0 pts.</td>
<td>Ground: 10 gals.</td>
<td>-</td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Apply after the pods are fully mature.
- **DO NOT** graze treated areas or use the treated forage for animal feed.
- **DO NOT** make more than 4 applications per year.
- **DO NOT** allow spray to contact green stems, fruit or foliage.
- **DO NOT** graze treated areas.
- **DO NOT** feed cover crops grown in treated areas to livestock.
- Retreatment or spot spraying may be necessary for mature woody weeds, late-germinating weeds and grasses, and perennials.
- **DO NOT** make more than 3 applications per year.
- Retreatment of spot treatment may be necessary.
- **DO NOT** allow spray to contact green stems, foliage, flowers, or cones as injury may result.
- **DO NOT** allow animals to graze in treated hop yards.
- Silage and hop vine refuse may be fed to livestock.
- Spray only the basal 2 ft. of the vines for sucking and stripping. Repeat as necessary, but only up to 3 applications per season.
- **DO NOT** apply more than 2.0 pts./A per dormant season.
- Experience with varieties other than Cascade, Yakima Cluster, and Bullion is limited. If using DEVOUR on other varieties than these, test the use pattern on a small number of vines of each variety to determine sensitivity to injury. **DO NOT** use on unlisted varieties if unacceptable crop injury occurs.
- Chemical Pruning: Spray when vines are less than 3 ft. tall to burn back existing vines and obtain even emergence of subsequent vines.
- **APPLICATION TO HOP VINES LESS THAN 6 FT. TALL MAY CAUSE UNACCEPTABLE INJURY**
- **DO NOT** apply when weather conditions favor spray drift. To reduce spray drift a drift control agent may be included.
- **DO NOT** apply when weather conditions favor spray drift. To reduce spray drift a drift control agent may be included.
- **DO NOT** apply more than 2.0 pts./A per dormant season.
- May be tank mixed with Sinbar® Herbicide (terbacil) weed killer for improved contact activity and residual control of Italian ryegrass, prickly lettuce and groundsel. Apply this tank mixture no more than once per season. Always refer to Sinbar (terbacil) label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

</tr>
</tbody>
</table>

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 1 application per year.
- For heavy weed infestations or wild oat control use the higher specified rate. Apply only one application per season at the 2.7 pts./A dosage.
- Allow maximum weed and grass emergence prior to treatment but apply prior to crop emergence.
- Apply a maximum of 2.7 pts./A per season.

</tbody>
</table>

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 2 applications per year.
- To control or suppress small (1-6") emerged annual grass and broadleaf weeds in peanuts at ground crack. A second application may be made up to 28 days after ground crack.
- For at ground crack use, **DEVOUR** can be tank mixed with Pursuit® Herbicide or Dual MAGNUM for residual weed control.
- Always refer to the Pursuit or Dual Magnum label for a list of weeds controlled, application rates, necessary precautions, and use limitations.
- Make no more than 2 applications per season and **DO NOT** apply total of more than 10.8 fl. oz. of product per acre per season.
- Crop foliage sprayed will be injured in the form of bronzing and crinkling, but the crop will recover and develop normally.
- **DO NOT** apply by air.

<table>

</table>

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 2 applications per year.
- Tank mix **DEVOUR** with Basagran at 1 pt./A. for improved control of weeds such as cocklebur, bristly starbur, smartweed and prickly sida.
- This tank mix can be applied at the ground crack stage of peanuts. A second application may be made up to 28 days after ground crack.
- Make no more than 2 applications per season and **DO NOT** apply a total of more than 10.8 fl. oz. of product per acre per season.
- Crop foliage sprayed will be injured in the form of bronzing and crinkling, but the crop will recover and develop normally.
- Always refer to the Basagran label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.
- If peanuts show injury (leaf phytotoxicity and/or plant stunting) produced by any other herbicide treatment, **DO NOT** apply this tank mix as injury may be enhanced and/or prolonged.
- During prolonged periods of drought or unseasonably cold weather **DO NOT** apply this tank mix as unsatisfactory weed control may result.
- **DO NOT** apply by air.

**For Use Only in the states of:** Colorado, Delaware, Idaho, Illinois, Indiana, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Nebraska, Nevada, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Dakota, Utah, Washington, Wisconsin and Wyoming.
**Additional Precautions, Restrictions and Directions**

- For Fresh Market Potatoes Only. (Fresh Market Potatoes include potatoes that are sent directly from the field to a consumer, grocery store, or processor for use.)
- **DO NOT** make more than 2 applications per year.
- **DO NOT** use on potatoes that will be stored as tuber decomposition may result.
- Potatoes must be harvested promptly after desiccation and processed or consumed immediately.
- **DO NOT** apply to drought stressed potato vines.
- **DO NOT** use to desiccate the vines of seed potatoes as seed pieces may fail to germinate and grow normally.
- **DO NOT** pasture livestock in treated potato fields.
- **DO NOT** exceed 2.6 pts./A per season.
- Begin application when leaves begin to turn yellow.
- Immature potato foliage is tolerant to DEVOUR. However, desiccation will not be complete under this condition.
- Use 1.3 pts./A rate where quick vine kill is desired.
- For dense vine growth, use 2 applications of 0.6 pt/A. Split applications must be applied a minimum of five days apart.

**Additional Precautions, Restrictions and Directions**

- **DO NOT** make more than 3 applications per year.
- Apply as a broadcast spray before, during or after planting, but before crop emergence.
- When vegetation is dense, use higher specified rates and spray volumes.
- Seeding should be done with a minimum amount of soil disturbance.
- This product will not control weeds and grasses emerging after application. Crop plants emerged at time of application will be killed.
- DEVOUR may be tank mixed with other herbicides registered for this use for improved or extended weed control. Always refer to the tank mix product label(s) for weeds controlled, rates of applications, directions for use, limitations, and restrictions.
- **DO NOT** flood/flush within 48 hours of application in order to ensure complete kill of vegetation. If cool, cloudy and/or wet weather delays speed of kill, **DO NOT** flood/flush until complete kill is evident.

**Additional Precautions, Restrictions and Directions**

- **DO NOT** make more than 3 applications per year.
- A tank mix with Hoelon 3EC will improve grass control.
- Apply when weeds are actively growing and 1-6" in height. Weeds 6 inches or taller may not be controlled.
- **DO NOT** apply this tank mix to barley as crop injury may result.
- Always refer to the Hoelon 3EC label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.
### Sorghum (Grain)

**Preplant / Preemergence**
- **Rate per Acre**
  - Weeds 1-3": 1.3-1.7 pts
  - Weeds 3-6": 1.7-2.0 pts.
  - Weeds 6": 2.0-2.7 pts.
- **Minimum Total Spray per Acre**
  - Ground: 10 gals.
  - Air: 5 gals.
- **Grazing or Preharvest Interval (Days)**
  - 48 (grain)
  - 20 (forage)

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 3 applications per year.
- To allow maximum weed and grass emergence, seedbeds should be formed as far ahead of planting as possible.
- Seeding should be done with a minimum amount of soil disturbance.

---

**Sorghum (Grain)**

- **Atrazine & 2,4-D ester (Low Volatile) Tank Mix**
  - **Preplant / Preemergence**
    - Weeds 1-3": 1.3-1.7 pts
    - Weeds 3-6": 1.7-2.0 pts.
    - Weeds 6": 2.0-2.7 pts.
  - **Minimum Total Spray per Acre**
    - Ground: 10 gals.
    - Air: 5 gals.
  - **Grazing or Preharvest Interval (Days)**
    - 48 (grain)
    - 20 (forage)

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 3 applications per year.
- **DEVOUR** may be tank mixed with Atrazine for improved preemergence or residual weed control. The addition of 2,4-D ester (Low Volatile) may assist in the suppression of perennial and annual broadleaf weeds emerged at the time of application.
- Always refer to the specific product label(s) for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

---

**Sorghum (Grain)**

- **Harmony ® Extra Herbicide Tank Mix**
  - **Preplant**
    - 1.3 - 2.5 pts.
  - **Minimum Total Spray per Acre**
    - Ground: 10 gals.
  - **Grazing or Preharvest Interval (Days)**
    - 48 (grain)
    - 20 (forage)

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 3 applications per year.
- **DEVOUR** may be tank mixed with Harmony Extra.
- Always refer to the Harmony Extra label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

---

**Sorghum (Grain)**

- **Postemergence Directed (Including Hooded or Shielded)**
  - **Rate per Acre**
    - 0.7 - 1.3 pts.
  - **Minimum Total Spray per Acre**
    - Ground: 10 gals.
  - **Grazing or Preharvest Interval (Days)**
    - 48 (grain)
    - 20 (forage)

**Additional Precautions, Restrictions and Directions**
- **DO NOT** make more than 2 applications per year.
- Apply when weeds are actively growing.
- Use higher specified rate on larger or hard to control weeds. Weeds 6" or taller may not be controlled.
- **DO NOT** exceed 2 postemergence-directed applications or exceed a total of 5.3 pts. **DEVOUR** per season.

**HOODED OR SHIELDED SPRAYERS**
- To avoid excessive crop phytotoxicity, use a hooded or shielded sprayer with skids or wheels on the spray boom to maintain spray height.
- Apply by directing spray between the rows and by using hooded or shielded sprayers to prevent spray contact with crop plants.

**DIRECTED SPRAY WITHOUT HOODED OR SHIELDED SPRAYERS**
- Apply when sorghum is at least 12" tall when naturally standing.
- **DO NOT** exceed 30 psi nozzle pressure or spray under conditions which may cause excessive drift.
- Use precision directed-spray application equipment adjusted so that no more than the lower 3" of the sorghum stalk is contacted by the application spray.
- Some crop injury will occur. The degree of injury is related to the precision of application and spraying conditions.

---

**Soybeans**

- **Preplant or Preemergence**
  - **Rate per Acre**
    - Weeds 1-3": 1.3-1.7 pts.
    - Weeds 3-6": 1.7-2.0 pts.
    - Weeds 6": 2.0-2.7 pts.
  - **Minimum Total Spray per Acre**
    - Ground: 10 gals
    - Air: 5 gals
  - **Grazing or Preharvest Interval (Days)**
    - -
### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per season.
- **DO NOT** exceed a total of 4.0 pts. of DeVour per season.
- Apply as a broadcast spray before, during or after planting, but before crop emergence.
- **DEVOUR** may be tank mixed with the following herbicides for improved burndown or residual control: 2,4-DB Lorox, Canopy Dual, Magnum, Pursuit Herbicide, Goal, Harmony Extra, Scepter Herbicide (Preplant Only) Sencor Herbicide, Lasso, Surflan® Herbicide, Lexone, Turbo Herbicide, Linex
- The rate of this product to be used in these tank mixtures is dependent on weed height and growing conditions. Where weed canopy is dense or under dry conditions, use the highest specified rate of **DEVOUR**. Always refer to the respective product label(s) for a list of weeds controlled, rates of application, directions for use, limitations, and restrictions.
- The lower application rate may be used when weeds are less than 4" tap and a selective postemergence spray or cultivation will be made within 3 weeks after planting.
- Seeding should be done with a minimum amount of soil disturbance.
- **DO NOT** graze or harvest for forage or hay before the R3 stage of soybean development (early pod).

<td></td>
</tr>
</tbody>
</table>

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Apply 2,4-D ester (Low Volatile) at 0.35-0.475 lbs. a.i/A at least 7 days prior to planting.
- Apply 2,4-D ester (Low Volatile) at 0.475-0.95 lbs. a.i/A at least 30 days prior to planting.
- **DO NOT** apply 2,4-D ester (Low Volatile) prior to planting soybeans if you are not able to accept the results of soybean injury including possible loss of stand and yield.
- **DO NOT** use amine formulation as **DEVOUR** activity may be reduced.
- May be tank mixed with residual herbicides listed above.
- Always refer to the 2,4-D ester (Low Volatile) label for weeds controlled, rates of application, directions for use, limitations, and restrictions.

### HOODED OR SHIELDED SPRAYERS

- Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants.
- Use higher specified rate on larger (less than 6") or hard to control weeds. Weeds 6" or taller may not be controlled.
- Severe damage and/or complete kill can occur if spray intentionally or accidentally (including drift of fine droplets) contacts the plants.

### DIRECTED SPRAY WITHOUT HOODED OR SHIELDED SPRAYERS

- **DO NOT** treat on soybeans that are less than 8" tall.
- Use precision directed spray application equipment adjusted so that no more than the lower 3" of the soybean plant is contacted by the application spray.
- **DO NOT** exceed 30 psi nozzle pressure or spray under conditions which may cause excessive drift. Some crop injury will occur. The degree of injury is dependent upon the precision of application and spraying conditions.

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Indeterminant varieties: Applications should be made when at least 65% of the seed pods have reached a mature brown color or when seed moisture is 30% or less. Indeterminant varieties: Apply when plants are mature, i.e., beans are fully developed, 1/2 of leaves have dropped, and remaining leaves are yellowing.
- Injury will occur on immature soybeans.
- Mature cocklebur, especially drought-stressed plants are tolerant to **DEVOUR** and desiccation will not be complete. Always use the higher specified rate when treating cocklebur.
- **DO NOT** apply within 15 days of harvest.
- **DO NOT** graze or harvest for forage or hay.

</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- To allow maximum emergence of weeds prepare ground early.
- Apply prior to planting. Plant with minimal soil disturbance.
- For heavier weed infestations, use the higher specified application rate.
- **DO NOT** apply in less than 20 gallons per acre, as weed control will be reduced.
- For improved burndown or residual control, tank mix DEVOUR with other herbicides labeled for this use.
- Always refer to the specific tank mix herbicide label(s) for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 5 applications per year, except for: Apricots, Cherries, Kiwi Fruit, Nectarines, Peaches, Plums, no more than 3 applications per year; Olives, no more than 4 applications and Pistachios, no more than 5 applications but only 2 applications after shells split.
- **DO NOT** allow spray to make contact with green stems (except suckers), fruit or foliage.
- Use the shield or wrap plant when spraying around young trees or vines.
- **DO NOT** apply when figs, nuts or olives to be harvested are on the ground.
- **DO NOT** feed covered crops grown in treated areas to livestock.
- **DO NOT** apply when figs, nuts or olives to be harvested are on the ground.
- **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For apricots - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For cherries - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For figs - **DO NOT** harvest within 13 days after application and **DO NOT** exceed 5 postemergence directed applications per season.
- For grapes - **DO NOT** harvest within 13 days after application and **DO NOT** exceed 5 postemergence directed applications per season.
- For kiwi fruit - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For mature woody weeds, perennial weeds, late germinating weeds and green suckers, retreatment or spot treatment may be necessary.
- For nectarines - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For olives - **DO NOT** harvest within 13 days after application and **DO NOT** exceed 4 postemergence directed applications per season.
- For olives - **DO NOT** harvest within 13 days after application and **DO NOT** exceed 4 postemergence directed applications per season.
- For peaches - **DO NOT** harvest within 14 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For pistachios - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.
- For plums - **DO NOT** harvest within 28 days after application and **DO NOT** exceed 3 postemergence directed applications per season.

</tr>
</tbody>
</table>

#### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- Seedbeds or plantbeds should be formed far enough ahead of treatment as possible to permit maximum weed emergence.
- Banded or broadcast treatment applications can be made before, during or after planting but prior to the crop emergence.
- For heavier weed infestations, use the higher specified rate.
- Seeding or transplanting should be done with a minimum amount of soil disturbance.
- Crop plants emerged at time of application will be killed.
- **DEVOUR** can be used in fallow bed/stale seedbed for weed control alone or tank mixed with Goal®. Always refer to the Goal label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.
- **DO NOT** harvest tomatoes within 30 days after application.
### VEGETABLES

#### Devour on Tomatoes
- **Directed Spray**
  - Rate per Acre: 1.3 pts
  - Minimum Total Spray per Acre: Ground: 10 gals.

#### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 3 applications per year.
- Use precision directed spray application equipment adjusted to prevent spray contact with crop plants.
- **DO NOT** exceed 30 psi nozzle pressure.
- **DO NOT** spray under conditions which may cause excessive drift.
- Apply when weeds are succulent and weed growth is less than 6".
- **DO NOT** apply more than 3 applications per season.
- **DO NOT** harvest tomatoes within 30 days after application.

#### Devour on Lettuce, Melon, Sugar Beets, Tomatoes
- **Broadcast**
  - Rate per Acre: 0.4 - 0.7 pts
  - Minimum Total Spray per Acre: Ground: 10 gals.

#### Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 2 applications per year.
- For control of volunteer barley in preformed seedbeds.
- **DO NOT** harvest tomatoes within 30 days after application.

#### Devour on Rhubarb
- **Dormant**
  - Rate per Acre: 1.7 - 2.7 pts
  - Minimum Total Spray per Acre: Ground: 10 gals.

#### Additional Precautions, Restrictions and Directions
- **DO NOT** exceed 2 applications per year.
- Apply during dormant season before buds in crown begin to grow.

### Resin Soaking

**Pines including Loblolly, Shortleaf, Longleaf, Slash, Virginia, Pond, Pitch, and Spruce Pines.**

**Tree Selection** - Trees should be selected from stands on sites not subject to stress from periods of extreme drought stress because the desiccating effect of Devour is accentuated during drought, causing a reduction in the amount of oleoresin deposited in the xylem. Vigorous, non-stagnated natural or planted stands should be selected. Plan Devour treatments in stagnated or commercial timber stands, not sooner than three years after a commercial thinning.

**Application Directions:** To bring the treatment into contact with sapwood (or xylem); apply water-diluted Devour to an appropriate wound in the tree trunk. Bark Streaks or Cuts: Use a standard or rotary bark hack or a chainsaw shipping tool (used in naval stores work) to remove a single 1-inch wide streak of bark about 1-2 ft. from ground level. **DO NOT** exceed 1/3 of the circumference of the tree. Serious girdling of the trunk and premature death of the tree can result if multiple streaks or cuts are made. Apply a coarse spray (about 1.7-5.0 ml) Devour solution (1-5% cation, wt./wt. basis) to runoff to the exposed xylem, using a low-pressure sprayer. The amount of spray required per cut depends on tree circumference and the length of cut or streak. For example, for a 9-inch diameter tree, using 3 ml of 2 or 4% Devour solution will cover the 1-inch wide streak and will result in application of 60 or 120 mg per streak.

**Time of Treatment:** Less severe pine beetle infestation and longer tree life usually result during cool season treatments under non-drought seasons. However, resin soaking can occur from treatments made any time of the year.
Interval between Treatment and Tree Harvest: There should be at least a 6-month interval between application of DEVOUR and tree harvest. However, it is preferable the interval is from 12-24 months, even though intervals of over 6 months may not be possible under conditions of drought or serious pine beetle attacks possibly making early harvest necessary. With this treatment, there is a potential for promoting beetle attack or causing premature death of the tree. At high dosage rates, desiccation of the xylem tissue, rather than the desired resin soaking, may occur.

NOTE: This type of treatment may reduce stem growth during between treatment and tree harvest.

<table>

</thead>
<tbody>
<tr>
<td>CONSERVATION RESERVE, FEDERAL SETASIDE, CONSERVATION COMPLIANCE PROGRAMS</td>
<td>Broadcast</td>
<td>1.7 - 2.7 pts</td>
<td>Ground: 10 gals.</td>
</tr>
</tbody>
</table>

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.
- DEVOUR may be tank mixed with other herbicides registered for this use for improved emerged weed control or extended weed control.
- Always refer to tank mix herbicide labels for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

### NONCROP USES

<table>
<thead>
<tr>
<th>CROP USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast or Spot Treatment</td>
<td>1.7 - 2.7 pts</td>
<td>Ground: 10 gals.</td>
<td>-</td>
</tr>
</tbody>
</table>

### Additional Precautions, Restrictions and Directions

Repeat applications as necessary but **DO NOT** make more than 10 applications per year.

- **TO** be used in noncrop areas including public airports, electric transformer stations, pipeline pumping stations, around commercial buildings, storage yards and other installations, and fence lines.
- Avoid spray contact with the foliage of ornamentals or desired plants.

### PASTURE RESEEDING

For suppression of existing sod and undesirable emerged broadleaf weeds and grasses prior to or at time of planting grasses or forage legumes.

<table>
<thead>
<tr>
<th>CROP USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast</td>
<td>0.7 - 1.3 pts.</td>
<td>Ground: 10 gals.</td>
<td>See specific geographic directions</td>
</tr>
</tbody>
</table>

### Additional Precautions, Restrictions and Directions

- **DO NOT** make more than 3 applications per year.

#### West of Cascade and Sierra Nevada Mountains

- Apply in October through December after first fall rains and after weeds have emerged and sod has started new growth.
- Apply on moderately to heavily grazed areas for best seeding results.
- **DO NOT** use in heavy sod and weed growth areas.

#### East of Rocky Mountains

- Use the 1.3 pts rate on vigorous or coarse sod species such as bromegrass.
- Apply prior to, or at time of seeding grasses or forage legumes.
- Apply only to grazed or mowed pastures not more than 3" in height at time of treatment.

### Bermudagrass or Bahiagrass Sods

- Apply in late summer or early fall to sod not exceeding 3" in height.
- For control of emerged little barley, apply in February or March before the mid-boot stage of little barley.

### Bermudagrass and Coastal Bermudagrass Pastures

- Apply when bermudagrass is dormant.
- For control of little barley, apply before the mid-boot stage.
- **DO NOT** mow for hay until 40 days after treatment.
For control of endophyte-fungus-infected fescue forage, legume/gram mixture and other grass pastures

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>

</thead>
<tbody>
<tr>
<td>Broadcast (Split Application)</td>
<td>0.7-1.3 pts followed by 0.7-1.3 pts.</td>
<td>Ground: 10 gals</td>
<td></td>
<td>-</td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 2 applications per year.
- Use split applications of 10-21 days apart if necessary.
- **DO NOT** exceed 2.6 pts./A total in preparation for reseeding.
- For spring plantings, the initial application of 0.7-1.3 pts. may be made the previous fall.
- Apply when fescue is actively growing and no more than 4” high.
- To reduce the infestation of endophyte-infested grass, **DO NOT** allow fescue to go to seed starting with the preceding year’s crop.

For prickly pear desiccation in pastures

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spot Sprays</td>
<td>0.8 fl. oz. per gallon of water</td>
<td>Spray to wet weed foliage</td>
<td></td>
<td>-</td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 10 applications per year.
- Hand-held equipment such as knapsacks backpack sprayers, pump-up pressure sprayers, hand guns, and hand wands; can be used to direct the spray onto weed foliage so that the spray thoroughly wets foliage.
- Mix 0.8 fl. oz. of DEVOUR and 1/3 fl. oz. of a nonionic surfactant per gallon of water.
- Completely and uniformly cover all green prickly pear foliage with spray.
- Apply in May through September for best desiccation results.
- **DO NOT** use more than 1.6 pts. of DEVOUR per acre per year.
- Apply only to pastures with no more than 3” of height at time of treatment.
- Tank mix with Grazon® P+D Specialty® herbicide at a rate of 1-2 fl. oz. per gallon of water for improved desiccation and perennial control of prickly pear.
- Always refer to the Grazon P+D Specialty herbicide label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

For Juniper Species leaf moisture reduction or desiccation prior to prescribed burning of pastures.

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast</td>
<td>1.3 pts.</td>
<td>Air: 5 gals</td>
<td></td>
<td>-</td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 10 applications per year.
- Use only in conjunction with prescribed burning as recommended and monitored by local SCS or University and Extension Range Specialists.
- Apply during hot, dry weather conditions (generally July and August).
- Use 2% v/v nonionic surfactant in a minimum of 5 gal spray solution.
- Monitor juniper leaf moisture content. Maximum leaf moisture reduction generally occurs 3-4 weeks after DEVOUR application.
- Significant soil moisture and/or wet weather conditions prior to or after application will decrease the potential for juniper crown burns.
- Reduction in leaf moisture can be adversely affected by cool or humid weather conditions.
- **DO NOT** graze livestock after application or prior to burning.

For Native Pastures

<table>
<thead>
<tr>
<th>CROP</th>
<th>USE PATTERN</th>
<th>DEVOUR RATE PER ACRE</th>
<th>MINIMUM TOTAL SPRAY PER ACRE</th>
<th>GRAZING OR PREHARVEST INTERVAL (DAYS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast</td>
<td>1.0 - 1.25 pts</td>
<td>Ground: 10 gals</td>
<td>Air: 5 gals</td>
<td>-</td>
</tr>
</tbody>
</table>

Additional Precautions, Restrictions and Directions
- **DO NOT** make more than 2 applications per year.
- Apply DEVOUR for control of downy and Japanese brome.
- Apply in spring after 90% node formation of brome species, but before full bloom.
- Emerged native perennial grasses will be burned by application, but application after 90% node formation will allow adequate time for native grasses to recover and attain maximum growth in the use season.
- **DO NOT** apply more than 1.25 pts. DEVOUR per year.
- Apply only to pastures with no more than 3” of height at time of treatment.
### Conversion Table

**Devour to Be Applied**

### Storage and Disposal

**DO NOT** contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in original container and place in a locked storage area. **DO NOT** mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. Store at temperatures above 32°F. For Emergencies involving a Spill, Leak, Fire, Exposure, or Accident, contact: CHEMTREC at (800) 424-9300.

**PESTICIDE DISPOSAL:** Pesticide wastes are acutely hazardous. Improper disposal of excess, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**CONTAINER DISPOSAL:** Nonrefillable container. **DO NOT** reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

**Pressure rinse as follows:** Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Hold container, upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.
