PHYSICAL OR CHEMICAL HAZARDS

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing with signs of damage, deterioration, or chemical contamination.

Fyfanon ULV AG is used undiluted in any specially designed aircraft or ground equipment that has been adapted and calibrated for ULV spraying. Apply it only when weather conditions are favorable. The following weather conditions must exist at the time of application:

• Use only at wind speeds of 10 mph or less, gusts approach 15 mph. For all non-aerial applications, wind speed must be measured adjacent to the application site on the upwind side, immediately prior to application.

• Do not apply in heavy or gusty winds.

• Do not apply to crops in bloom at any stage of development.

• Do not apply directly to water, or to areas where surface water is present or water bodies located within 200 feet of area to be treated. Maintain vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from runoff.

• Use mist blowers with a pump capable of producing 40 psi and blower speeds of 2600 rpm. Use flat fan nozzles, 8001 to 8002, placed 30º into air blast, or rotary atomizers placed into the air blast that produces a uniform spray pattern and a droplet size distribution of 10-20 microns. Pneumatic-type spray nozzles, as suggested by equipment manufacturers, may also be effective.

• Use higher rate when foliage is heavy or infestation is severe.

• Use lower rate on light crops or when conditions are favorable for insect control. When making a ULV application with aerial application equipment, a minimum buffer zone of 50 feet must be maintained along any water body.

Droplet Size

When making a ULV application with aerial application equipment, a minimum buffer zone of 50 feet must be maintained along any water body.

**Apply when day temperature is expected to be above 65°F and when 50-70% of leaves show damage.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. For any requirements specific to your State or tribe, consult the agency responsible for pesticide regulation.

**Apply when day temperature is expected to be above 65°F and when 50-70% of leaves show damage.

**Apply when day temperature is expected to be above 65°F and when 50-70% of leaves show damage.

Some insects are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management practices. For more information, consult your State Experiment Station or State Extension Service for proper timing of sprays.
**PRECAUTIONS AND RESTRICTIONS FOR APPLICATION TO COTTON TO CONTROL BOLL WEEVIL**

Student reports that this product is not labeled for field application on cotton. However, in some areas of the southern U.S., boll weevils can be controlled in cotton with Fyfanon ULV AG. Treatment should be made as necessary, but applications should be made no later than 9 days prior to harvest to allow for the development of a sufficient number of immature boll weevils to pupate and be killed by the insecticide. For applications that are made prior to 9 days before harvest, it is not necessary to treat the cotton to control boll weevils. However, if applications are made after 9 days before harvest, the insecticide must be used in accordance with all applicable federal, state, and local regulations.

For more information on the proper use of this product, please contact your local agricultural authority or FMC representative.

**ACTIVE INGREDIENT:**

Fyfanon ULV AG is a cholinesterase inhibitor. It is an organophosphate and is a cholinesterase inhibitor.

**SAFETY PRECAUTIONS:**

- **Ingestion:** If swallowed, do not induce vomiting. Give 1-2 oz. of water or milk. Seek medical attention immediately.
- **Skin Contact:** Wash thoroughly with soap and water. Seek medical attention if irritation persists.
- **Eye Contact:** Flush eyes with running water for at least 15 minutes. Seek medical attention if irritation persists.
- **Respiratory Irritation:** If breathing is difficult, give artificial respiration. Seek medical attention immediately.

**APPLICATION INFORMATION:**

- **Application Rate:** Use the application rate of 2 to 4 fluid ounces per acre for control of adult flies. Application may be made via ground or aerial equipment and may be repeated as necessary.
- **Volume:** Use 107 fl. oz. per acre for treatment.
- **Application Period:** Use Fyfanon ULV AG in early to midseason when adult flies are present.
- **Volume Median Diameter:** Fyfanon ULV AG has a volume median diameter of 100 microns (Dv0.5 = 100 microns) or greater.
- **Spray Equipment:** Use ground equipment to treat field edges when possible, covering areas that cannot be treated effectively with aircraft because of obstructions which may affect applicator safety, or where there is no practical way to minimize drift.

**COMPATIBILITY:**

- **Mixing with Other Products:** Fyfanon ULV AG may be tank mixed with the same insecticide formulations used in the field. However, it may be incompatible with some formulations and will result in an increase in drift.

**WARRANTY DISCLAIMER:**

FMC warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the warranty disclaimer. This warranty is limited to the replacement of the product only. FMC disclaims any other warranties, express or implied, including, but not limited to, any implied warranties of merchantability or fitness for a particular purpose or other regulatory compliance.

**USE DIRECTIONS:**

- **Surface Application:** Use Fyfanon ULV AG for surface applications to control flies and other insects. For aerial applications, the spray boom should be mounted on the aircraft as to minimize drift caused by wingtip or rotor vortices. The minimum practical boom length should be used and outermost nozzles should be adjusted to cover areas that cannot be treated effectively with aircraft because of obstructions which may affect applicator safety or where there is no practical way to minimize drift.
- **Application Equipment:** Use ground equipment to treat field edges when possible, covering areas that cannot be treated effectively with aircraft because of obstructions which may affect applicator safety, or where there is no practical way to minimize drift.

**INERT INGREDIENTS:**

- **Sulfur:** 2.5, 3.0
- **Polyethylene glycol:** 3.0
- **Polyethylene oxide:** 2.5

**APPLICATION DATA FOR USE IN COTTON TO CONTROL BOLL WEEVIL**

**Use Directions:**

- **Application Rate:** Use Fyfanon ULV AG at a rate of 2 to 4 fluid ounces per acre for control of adult flies. Application may be made via ground or aerial equipment and may be repeated as necessary.
- **Volume Median Diameter:** Fyfanon ULV AG has a volume median diameter of 100 microns (Dv0.5 = 100 microns) or greater.
- **Spray Equipment:** Use ground equipment to treat field edges when possible, covering areas that cannot be treated effectively with aircraft because of obstructions which may affect applicator safety or where there is no practical way to minimize drift.

**LIMITATION OF REMEDIES:**

- **Amounts:** The maximum amount of Fyfanon ULV AG that may be applied is 107 fl. oz. per acre.
- **Restricted Entry:** Fyfanon ULV AG is a cholinesterase inhibitor. It is an organophosphate and is a cholinesterase inhibitor. The maximum amount of Fyfanon ULV AG that may be applied is 107 fl. oz. per acre.
