Appropriate engineering controls

Engineering measures  
Apply technical measures to comply with the occupational exposure limits. When working in confined spaces (tanks, containers, etc.), ensure that there is a supply of air suitable for breathing and wear the recommended equipment.

Individual protection measures, such as personal protective equipment

Eye/Face Protection  
For dust, splash, mist or spray exposure, wear chemical protective goggles.

Skin and Body Protection  
Coveralls worn over long-sleeved shirt and long pants with socks. Wear chemical-resistant footwear, gloves and headgear.

Hand Protection  
Rubber/latex/neoprene or other suitable chemical resistant gloves.

Respiratory Protection  
For dust, splash, mist or spray exposures wear a filtering facepiece respirator (N95, R95, or P95) which is approved for pesticides (U.S. NIOSH/MSHA, EU CEN or comparable certification organization).

Hygiene measures  
Clean water should be available for washing in case of eye or skin contamination. Wash skin prior to eating, drinking, chewing gum or using tobacco. Shower or bathe at the end of working. Remove and wash contaminated clothing before re-use. Launder work clothing separately from regular household laundry.

General information  
If the product is used in mixtures, it is recommended that you contact the appropriate protective equipment suppliers. These recommendations apply to the product as supplied

**Serious eye damage/eye irritation**  
Severely irritating (rabbit).

**Skin corrosion/irritation**  
Severely irritating (rabbit).

**Sensitization**  
May cause sensitization by skin contact

**Information on toxicological effects**

**Symptoms**  
Large doses of zeta-cypermethrin, ingested by laboratory animals, may produce signs of toxicity including tremors, incoordination, convulsions, staggered gait, and oral discharge.

**Delayed and immediate effects as well as chronic effects from short and long-term exposure**

**Chronic toxicity**  
Zeta-cypermethrin: Long-term exposure caused neurotoxicity (body tremors, decreased motor activity), decreased body weight and increased liver weight.

**Mutagenicity**  
Chlorpyrifos, Zeta-cypermethrin: Not genotoxic in laboratory studies

**Carcinogenicity**  
Chlorpyrifos: No evidence of carcinogenicity from animal studies. Cypermethrin caused an increase in benign lung tumors in mice, but not in rats. EPA has classified cypermethrin as a possible human carcinogen based on this information, but does not regulate based on its low cancer risk. There was no evidence of carcinogenic activity of naphthalene in male mice, but there was some evidence of carcinogenic activity in female mice and clear evidence of carcinogenic activity in male and female rats in 2-year inhalation studies conducted by the National Toxicology Program (NTP).

**Neurological effects**  
Chlorpyrifos: Chronic exposure to animals has caused decreased cholinesterase activity (erythrocyte, plasma, and/or brain). Zeta-cypermethrin: Causes neurotoxicity (tremors and decreased motor activity) following acute, subchronic or chronic exposure.

**Reproductive toxicity**  
Chlorpyrifos, Zeta-cypermethrin: No toxicity to reproduction in animal studies.

**Developmental toxicity**  
Chlorpyrifos, Zeta-cypermethrin: Not teratogenic in animal studies.

**STOT - single exposure**  
May cause respiratory irritation. See listed target organs below.

**STOT - repeated exposure**  
May cause damage to organs through prolonged or repeated exposure. See listed target organs below.

**Target organ effects**  
Zeta-cypermethrin: Central Nervous System (CNS),
Chlorpyrifos: Chronic exposure to animals has caused decreased cholinesterase activity (erythrocyte, plasma, and/or brain). Zeta-cypermethrin: Causes neurotoxicity (tremors and decreased motor activity) following acute, subchronic or chronic exposure.

**Aspiration hazard**  
No information available.
