EPA Reg. No. 42750-19
EPA SLN No. AZ260003

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This labeling must be in the possession of the user at the time of application. Follow all applicable directions, restrictions, Worker Protection Standard requirements and precautions on the EPA registered label.

This label for 2,4-D AMINE 4 expires and must not be distributed or used in accordance with this SLN registration after December 31, 2032.

THREATENED AND ENDANGERED SPECIES Special local needs (SLN) labels are important to states like Arizona with niche industries and significant economic risks due to local pest problems. Our stewardship of this important labeling process is important and must also consider the potential off-target effects of any pesticide used in Arizona. This includes any potential harm to threatened or endangered (TE) species in our state. Please carefully consider the use of this pesticide and obtain as much information as you can to help ensure your application will have no impacts on TE species.

ARIZONA GROUNDWATER INFORMATION
The active ingredient of this product is on Arizona's Groundwater Protection List. This means the product's chemical/physical characteristics show that it has the ability to leach into groundwater. The use of this product requires reporting of the application information (1080) to the Arizona Department of Agriculture.

SPRAY DRIFT MANAGEMENT
Avoiding spray drift at the application site is the responsibility of the applicator. A variety of factors including weather conditions (e.g. wind direction, wind speed, temperature, relative humidity) and method of application can influence spray drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product. Refer to the Section 3 label accompanying this label for information on spray drift management.

For use only on Hesperaloe grown for fiber.

Best results are obtained when 2,4-D AMINE 4 is applied to young succulent weeds that are actively growing. The lower specified rates will be satisfactory on susceptible annual weeds. For perennial weeds and conditions such as the very dry areas of Arizona, use the higher specified rate.

Apply 5 to 100 gallons / acre by ground equipment. Mixing 2,4-D AMINE 4 with oil, surfactants, or other adjuvants may reduce herbicide's selectivity and could result in crop damage.

Do not allow 2,4-D AMINE 4 to come into contact with desirable, susceptible plants such as beans, cotton, fruit trees, grapes, legumes, ornamentals, peas, tomatoes, and other vegetables. Excessive amounts of this product in the soil may temporarily inhibit seed germination and plant growth.

APPLICATION TIMING / APPLICATION METHOD	2,4-D AMINE 4 (pt/acre)	SPECIFIC USE DIRECTIONS
Pre-Plant / Broadcast In-Crop / Spot Treatment or Directed Application	2 (32 fl oz) (0.95 lb AE)	Use coarse, low-pressure sprays and sufficient water for thorough coverage of weeds. Apply to annual weeds when small and actively growing. Apply to perennial weeds from bud to bloom stage.

Restrictions:

- When used in-crop, **DO NOT** apply until Hesperaloe is 6 inches or more in height.
- **DO NOT** apply more than 64 fl oz (1.9 lbs AE) / Acre per year.
- **DO NOT** apply more than 32 fl oz (0.95 lbs AE) / Acre per application.
- **DO NOT** make more than 2 applications per year at the maximum rate of 32 fl oz (0.95 lbs AE) / Acre.
