## FOR CONTROL OF BLACK VINE WEEVIL (ADULT) IN CRANBERRY

### Directions For Use

AVAUNT insecticide is recommended as a foliar application to control adult black vine weevil in cranberry.

Apply AVAUNT insecticide at 6.0 oz/acre (0.11 lb a.i./acre) as a foliar spray based on locally established treatment thresholds.

Black vine weevil adults are nocturnal feeders - it is important to monitor adult emergence by regular sweeping or trapping in the evening hours. Make repeat applications on a 7 to 10 day schedule if monitoring indicates continued adult feeding activity. Broadcast applications may need supplemental spot treatments in localized areas of heavy insect pressure. Allow 5 to 7 days to achieve maximum efficacy.

#### RESTRICTIONS:

Do not apply more than 24 oz AVAUNT insecticide (0.44 lb a.i.) per acre per crop.

Make no more than 3 applications per acre per season.

The minimum interval between sprays is 7 days.

The preharvest interval is 30 days.

Do not apply to flow through bogs or allow release of irrigation water from bogs for at least 1 day following application.
