FOR CONTROL OR SUPPRESSION OF OMNIVOROUS LEAFROLLER IN GRAPES

Directions For Use

AVAUNT insecticide is recommended for the control or suppression of Omnivorous Leafroller in Grapes.

Apply AVAUNT insecticide at 5.0 to 6.0 ounces per acre (0.09 - 0.11 lb a.i./acre) as a foliar spray using properly calibrated ground spray equipment for control of Omnivorous Leafroller. Apply AVAUNT insecticide at 3.5 to 5.0 oz per acre (0.065 - 0.09 lb a.i./acre) for suppression of Omnivorous Leafroller in Grapes.

Make the first application at initiation of egg hatch or at first signs of infestation for each generation. Use the higher application rate for moderate to heavy insect pressure. Make application before pests reach damaging levels. Monitor fields and make an additional application if populations rebuild to potentially damaging levels. Apply in sufficient water to obtain thorough and uniform cover of foliage. Consult your state cooperative extension service, professional consultants or other qualified authorities to determine appropriate action threshold levels for this pest.

RESTRICTIONS:

Make no more than 2 applications per season.

Do not apply more than 12 oz AVAUNT insecticide (0.22 lb a.i.) per acre per year.

Minimum interval between sprays is 21 days.

The pre-harvest interval is 7 days.
