IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS ON THE EPA REGISTERED LABEL MUST BE FOLLOWED.

THESE USE DIRECTIONS MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF PESTICIDE APPLICATION.

REDUCED RATES FOR CONTROL OF COLORADO POTATO BEETLE AND CABBAGE LOOPERS IN POTATOES IN THE STATES OF IDAHO, NEVADA, OREGON AND WASHINGTON

Directions For Use

CORAGEN insect control is recommended for the control of Colorado Potato Beetle and Cabbage Looper larvae in potatoes.

Apply CORAGEN insect control at 2.0 to 5.0 fluid ounces per acre as a foliar spray or via overhead chemigation. For best results with foliar sprays, add Methylated Seed Oil (MSO) adjuvant at 1 gallon per 100 gallons of spray volume (1% v/v). For chemigation applications, apply in 0.1 to 0.2 acre inches of water and add MSO at 12 to 16 fl oz/acre.

Apply when populations reach local established thresholds to prevent crop damage.

CABBAGE LOOPER

CORAGEN insect control applied at 2.0 to 3.0 fluid ounces per acre should be used on early stage instars of Cabbage Looper (1st through 3rd instar). Larger larvae may require higher rates.

COLORADO POTATO BEETLE

CORAGEN insect control applied at 2.0 to 3.0 fluid ounces per acre should be used where local populations of Colorado Potato Beetle are believed to be sensitive to most commonly used insecticides. Apply just prior to or just after egg hatch while larvae are small. In some areas, where local populations of Colorado Potato Beetle have elevated levels of resistance to insecticides, CORAGEN insect control should be used at the 5.0 fluid ounce rate. With resistant populations of Colorado Potato Beetle, back-to-back applications on 5 to 7 day intervals may be required to achieve maximum control.

See the EPA-registered label for complete instructions on overhead chemigation.

See the RESISTANCE MANAGEMENT section of the CORAGEN insect control Section 3 Federal label for additional guidance regarding insecticide resistance management.

USE RESTRICTIONS

Do not apply more than 15.4 fluid ounces of CORAGEN insect control per acre per calendar year.

Do not make more than 4 applications per acre per crop.

The minimum retreatment interval is 5 days.

The preharvest interval is 14 days.

The field re-entry interval is 4 hours.

Read and follow all applicable directions, restrictions, and precautions on the EPA-registered label.
