REDUCED RATES FOR CONTROL OF BEET ARMYWORM AND WESTERN YELLOWSTRIPED ARMYWORM IN ALFALFA IN THE STATES OF ARIZONA, CALIFORNIA, OREGON AND WASHINGTON

Directions For Use

CORAGEN insect control is recommended for the control of Beet Armyworm and Western Yellowstriped Armyworm in Alfalfa.

Apply CORAGEN insect control at 2.5 to 5.0 fluid ounces per acre as a foliar spray using properly calibrated aerial or ground spray equipment for control of Beet Armyworm (*Spodoptera exigua*) and Western Yellowstriped Armyworm (*Spodoptera praefica*).

For best Results: Make the application at initiation of egg hatch, small larvae or at first signs of infestation. The lower recommended rate range can be used when shorter residual control is needed. Use the higher recommended rate range for heavy insect pressure or when longer residual control is desired. Make the application before pests reach damaging levels. Apply in sufficient water to obtain thorough and uniform cover of foliage. Consult your state cooperative extension service, professional consultants or other qualified authorities to determine appropriate action threshold levels for these pests in alfalfa.
