APPLICATIONS FOR CONTROL OF SESAME LEAFROLLER IN SESAME

Directions For Use

USE DIRECTIONS:

- Coragen® eVo insect control is recommended for control of sesame leafroller in sesame.
- Apply Coragen® eVo insect control at 1.2 – 1-7 fluid ounces per acre (0.047 – 0.066 lb ai/A) as a foliar spray.
- For best results, make applications to small larvae and before populations exceed treatment thresholds. Follow local university recommendations for treatment thresholds and best timing.
- Thorough spray coverage is essential for best performance. Use a minimum of 10 gallons by ground or 2 gallons by air. Higher spray volume of 15 gal. by ground and 3 gal. by air will improve control.
- Coragen® eVo insect control may be mixed with approved agricultural adjuvants in situations where spray coverage is difficult to achieve such as closed canopy or dense foliage. An oil-based adjuvant may improve deposition in hot dry weather. Follow directions on adjuvant manufacturer's label.
- Chemigation: Refer to the Coragen® eVo insect control Section 3 label for specific directions and precautions for application via chemigation.
