APPLICATIONS FOR SUPPRESSION OF SUGAR BEET LEAFMINER IN SUGAR BEETS

Directions For Use

Coragen® eVo insect control is recommended for suppression of sugar beet leafminer (*Pegomya betae*) in sugar beets grown for sugar and for seed.

Apply Coragen® eVo insect control at 1.2 - 2.5 fl. oz. per acre (0.047 - 0.098 lb. a.i./A) as a foliar spray.

For best results, make applications before populations exceed treatment thresholds. Follow local university recommendations for treatment thresholds and best timing.

Thorough spray coverage is essential for best performance. Use a minimum of 10 gallons by ground or 5 gallons by air. Higher spray volume of 15 gal. by ground will improve coverage.

Adjuvants such as methylated seed oil (MSO) should be added for improved coverage and residual.

See the RESISTANCE MANAGEMENT section of the Coragen® eVo insect control Section 3 Federal label for additional guidance on insecticide resistance management.
