

PyroxIt™ HL

A selective residual herbicide for use in agricultural crops: celery; corn; fallow; mint; perennial cool-season grasses grown for seed production; safflowers, soybean; sunflower; wheat.

[PyroxIt HL is not for sale, distribution, or use in Nassau and Suffolk counties in New York State.]

Active Ingredient:

pyroxasulfone: 3-[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1H-pyrazol-4-ylmethylsulfonyl]-4,5-dihydro-5,5-dimethyl-1,2-oxazole.....63.26%

Other Ingredients:.....36.74%

Total: 100.00%

Contains 6.97 pounds of pyroxasulfone per gallon formulated as a water-based suspension concentrate.

KEEP OUT OF REACH OF CHILDREN CAUTION/PRECAUCIÓN

*Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you **DO NOT** understand the label, find someone to explain it to you in detail.)*

Net Contents: 1.5g (5.678L)

Shake container well before use.

Made using SESGAMA™ Formulation Technology

FIRST AID	
If swallowed:	• Call a poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • DO NOT induce vomiting unless told to do so by the poison control center or doctor. • DO NOT give anything by mouth to an unconscious person.
If on skin or clothing:	• Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 to 20 minutes. • Call a poison control center or doctor for treatment advice.
If in eyes:	• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. • Remove contact lenses, if present, after first 5 minutes; then continue rinsing. • Call a poison control center or doctor for treatment advice.
If inhaled:	• Move person to fresh air. • If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably by mouth to mouth if possible. • Call a poison control center or doctor for further treatment advice.
HOTLINE NUMBER	
Have the product container or label with you when calling a poison control center at 1-800-222-1222 or doctor or going for treatment. You may also contact 1-877-424-7452 for emergency medical treatment information.	

FOR CHEMICAL EMERGENCY, SPILL, LEAK, FIRE, EXPOSURE, OR ACCIDENT, CALL: CHEMTREC 1-800-424-9300 (24 HOURS).

Please refer to booklet for first aid, precautionary statements, and directions for use and storage and disposal instructions.

Precautionary Statements Hazards to Humans and Domestic Animals

CAUTION. Harmful if swallowed or if absorbed through skin. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

2.0 User Safety and Agricultural Use Requirements

2.1 Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride ≥ 14 mils, or viton ≥ 14 mils
- Shoes plus socks

For aerial application, mixers and loaders must also wear a minimum of a NIOSH approved filtering face piece respirator with any N filter (TC-84A). You can also use other NIOSH approved particulate respirators that offer more protection, including a half face or full face respirator with any filter or a powered air purifying respirator with an HE filter. For more information about these options, see www.epa.gov/pesticide-respirators.

User Safety Requirements

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions exist for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove and wash contaminated clothing before reuse. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. **DO NOT** reuse them.

2.2 Engineering Controls Statement

When handlers use closed systems or enclosed cabs that meet the requirements listed in the Worker Protection Standards (WPS) for agricultural pesticides 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS.

2.3 USER SAFETY RECOMMENDATIONS

Users should:

- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

2.4 AGRICULTURE USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. **DO NOT** enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, including plants, soil or water, is:

- Coveralls
- Chemical-resistant gloves such as barrier laminate, butyl rubber $\geq$ 14 mils, nitrile rubber $\geq$ 14 mils, neoprene rubber $\geq$ 14 mils, polyvinyl chloride $\geq$ 14 mils, or viton $\geq$ 14 mils
- Shoes plus socks

3.0 Environmental Hazards

DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. **DO NOT** contaminate water when disposing of equipment wash water or rinsate.

Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

3.1 Groundwater Advisory

This chemical has properties and characteristics associated with chemicals detected in groundwater. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

3.2 Surface Water Advisory

DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. **DO NOT** contaminate water when disposing of equipment washwater or rinsate. This product may impact surface water quality due to runoff or rainwater. This is especially true for poorly draining soils and soils with shallow groundwater. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features including ponds, streams, and springs will reduce potential loading of pyrooxasulfone and its degradation product, [5-(difluoromethoxy)-1-methyl-3(trifluoromethyl)-1H-pyrazol-4-yl]methanesulfonic acid (M1), from runoff water and sediment. Runoff of this product will be reduced by avoiding application when rainfall is forecast to occur within 48 hours.

3.3 Point-source Contamination. To prevent point-source contamination, **DO NOT** mix or load this or any other pesticide within 50 feet of wells (including abandoned wells and drainage wells, sinkholes, perennial or intermittent streams and rivers, and natural or impounded lakes and reservoirs). This setback does not apply to properly capped or plugged abandoned wells and does not apply to impervious pad or dike mixing/loading areas as described below. Mixing, loading, rinsing, or washing operations performed within 50 feet of a well are allowed only when conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be on or move across the pad. The pad must be self-contained to prevent surface water flow over or from the pad. The pad capacity must be maintained at 110% of that of the largest pesticide container or application equipment used on the pad and have sufficient capacity to contain all product spills, equipment or container leaks, equipment wash water, and rainwater that may fall on the pad. The containment capacity does not apply to vehicles delivering pesticide shipments to the mixing/loading site. States may have in effect additional requirements regarding wellhead setbacks and operational containment.

3.4 Mixing and Loading Advisory

Care must be taken when using this product to prevent back-siphoning into wells, spills, or improper disposal of excess pesticide, spray mixes, or rinsates. Check valves or anti-siphoning devices must be used on all mixing equipment.

3.5 Endangered Species Protection Requirements

This product may have effects on federally listed threatened or endangered plant species or their critical habitat. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the county or parish in which you are applying the pesticide. To determine whether your county or parish has a Bulletin, and to obtain that Bulletin, consult <http://www.epa.gov/espp/>, or call 1-800-447-3813 no more than 6 months in which the pesticide will be applied. New Bulletins will be available from the above sources 6 months before their effective dates.

Directions For Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

IMPORTANT: READ BEFORE USE

Read the entire label. Use strictly in accordance with precautionary statements and directions and with applicable state and federal regulations.

DO NOT apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Failure to follow directions and precautions on this label may result in crop injury, poor weed control, and/or illegal residues.

4.0 Product Information

Pyroxlt HL is a selective rate-dependent residual preemergence herbicide for controlling annual grass weeds, sedges, and annual broadleaf weeds (including biotypes resistant to ACCase inhibitors, ALS inhibitors, and glyphosate) that infest celery, corn, fallow, mint, perennial cool-season grasses grown for seed production, safflower, soybean, and sunflower listed in Table 1 and wheat listed in Table 2. Refer to Crop-specific Information section for use directions specific to each labeled crop.

Periods of dry weather following application of **Pyroxlt HL** may reduce herbicidal effectiveness. **Pyroxlt HL** must be activated by at least 1/2 inch of rainfall or irrigation before weed germination and emergence. When **Pyroxlt HL** is not activated and weeds emerge, a labeled postemergence herbicide or shallow cultivation may be needed to control weed escapes. **Pyroxlt HL** does not control emerged weeds.

Herbicidal activity of **Pyroxlt HL** may be reduced if trash on the soil surface from the previous crop covers more than 25% of the application area. Manage trash levels if needed with combine straw shredder/spreaders, earlier burndown of emerged weeds, or light tillage.

5.0 Weeds Controlled or Suppressed

Table 1. Weeds Controlled with a Residual Application of Pyroxlt HL in All Crops other than Wheat.

Common Name	Scientific Name
Annual Grass Weeds	
Barley, hare	<i>Hordeum murinum</i> spp. <i>leporinum</i>
Barnyardgrass	<i>Echinochloa crus-galli</i>
Bluegrass, annual	<i>Poa annua</i>
Brome, downy ¹	<i>Bromus tectorum</i>
Brome, Japanese ¹	<i>Bromus japonicus</i>
Canarygrass	<i>Phalaris canariensis</i>
Cheat ¹	<i>Bromus secalinus</i>
Crabgrass, large	<i>Digitaria sanguinalis</i>
Crabgrass, smooth	<i>Digitaria ischaemum</i>
Crowfootgrass	<i>Dactyloctenium aegyptium</i>
Cupgrass, southwestern	<i>Eriochloa acuminata</i>
Cupgrass, woolly ¹	<i>Eriochloa villosa</i>
Foxtail, giant	<i>Setaria faberi</i>
Foxtail, green	<i>Setaria viridis</i>
Foxtail, yellow	<i>Setaria pumila</i>
Goosegrass	<i>Eleusine indica</i>
Johnsongrass, seedling	<i>Sorghum halepense</i>
Millet, Texas ¹	<i>Urochloa texana</i>
Millet, wild-proso ¹	<i>Panicum miliaceum</i>
Oat, wild ¹	<i>Avena fatua</i>
Panicum, fall	<i>Panicum dichotomiflorum</i>
Red rice	<i>Oryza sativa</i>
Ryegrass, Italian	<i>Lolium perenne</i> spp. <i>multiflorum</i>
Ryegrass, rigid	<i>Lolium rigidum</i>
Sandbur, longspine ¹	<i>Cenchrus longispinus</i>
Shattercane ¹	<i>Sorghum bicolor</i> spp. <i>arundinaceum</i>
Signalgrass, broadleaf	<i>Urochloa platyphylla</i>
Sedges	
Nutsedge, yellow ¹	<i>Cyperus esculentus</i>
Annual Broadleaf Weeds	
Amaranth, Palmer	<i>Amaranthus palmeri</i>
Amaranth, Powell	<i>Amaranthus powellii</i>
Buckwheat, wild ¹	<i>Polygonum convolvulus</i>
Carpetweed	<i>Mollugo verticillata</i>
Chickweed, common ¹	<i>Stellaria media</i>
Fleabane, hairy ¹	<i>Conyza bonariensis</i>
Groundsel, common ¹	<i>Senecio vulgaris</i>
Henbit ¹	<i>Lamium amplexicaule</i>
Horseweed (Marestail) ¹	<i>Conyza canadensis</i>
Jimsonweed ¹	<i>Datura stramonium</i>
Kochia ¹	<i>Kochia scoparia</i>
Lambsquarters, common ¹	<i>Chenopodium album</i>
Morningglory, entireleaf ¹	<i>Ipomoea hederacea</i>
Morningglory, pitted ¹	<i>Ipomoea lacunosa</i>
Nightshade, black	<i>Solanum nigrum</i>
Nightshade, Eastern black	<i>Solanum ptycanthum</i>
Pigweed	<i>Amaranthus</i> spp.
Pigweed, redroot	<i>Amaranthus retroflexus</i>
Pigweed, smooth	<i>Amaranthus hybridus</i>

Pigweed, tumble	<i>Amaranthus albus</i>
Purslane, common	<i>Portulaca oleracea</i>
Pusley, Florida	<i>Richardia scabra</i>
Ragweed, common ¹	<i>Ambrosia artemisiifolia</i>
Shepherd's-purse ¹	<i>Capsella bursa-pastoris</i>
Sida, prickly (Teaweed)	<i>Sida spinosa</i>
Velvetleaf ¹	<i>Abutilon theophrasti</i>
Waterhemp	<i>Amaranthus tuberculatus</i>

¹ Partial control or suppression only. **Pyroxlt HL** may be used in tank mixes or sequential applications with other labeled herbicides that provide additional control of noted weeds.

Table 2. Weeds Controlled¹ or Suppressed² with a Residual Application of Pyroxlt HL in Wheat

Common Name	Scientific Name	C = Control (only at the maximum application rate per soil texture) S = Suppression See Crop-specific Information section for specific rates.
Annual Grass Weeds		
Barley, hare	<i>Hordeum murinum</i> spp. <i>leporinum</i>	S
Barnyardgrass	<i>Echinochloa crus-galli</i>	S

Shepherd's-purse	<i>Capsella bursa-pastoris</i>	S

¹ Weeds including annual bluegrass and Italian ryegrass have the ability to adapt to several different herbicide sites of action. Even though **Pyroxlt HL** will control these species, some weed escapes are possible. Multiple herbicides with multiple different effective sites of action **MUST** be used in tank mixtures or sequentially to limit these weed escapes to prevent or delay the onset of herbicide-resistant weed biotypes.

² For control of these weeds, a tank mix partner or a sequentially applied herbicide partner is needed.

6.0 Crop Response

No crop injury is expected when **Pyroxlt HL** is applied according to label directions and under normal environmental conditions. Application to crops under stress because of inadequate or excess of moisture for normal crop development, cool and hot temperatures, sodic soils, poorly drained soils, hail damage, flooding, pesticide injury, mechanical injury, or widely fluctuating temperatures may result in crop injury.

7.0 Application Instructions

Application rates of **Pyroxlt HL** may vary depending on soil texture. Refer to Table 3 for soil texture groups used in this label unless a specific soil texture is mentioned. When use rates are in ranges, apply the low rate for soils with coarse texture or low organic matter; apply the high rates for fine soil textures, high organic matter, heavy soil surface plant residue, or heavy weed pressure.

Table 3. Soil Texture Groups

Coarse	Medium	Fine
Sand Loamy sand Sandy loam	Loam Silt loam Silt Sandy clay loam	Sandy clay Silty clay loam Silty clay Clay loam Clay

Pyroxlt HL may be used on peat soils and muck soils, and mineral soils with 10% or more organic matter, but weed control may be inconsistent and/or reduced. Use maximum labeled use rate allowed in the specific crop.

8.0 Active Ingredient Conversion Chart

Use Table 4 to determine the corresponding amounts of active ingredient (pyroxasulfone) from **Pyroxlt HL** product use rates.

Table 4. Use Rate Equivalency

Amount of Pyroxlt HL (fl oz/A)	Amount of Pyroxasulfone (lb ai/A)
0.60	0.033
0.75	0.041
1.00	0.053
1.20	0.065
1.50	0.081
1.65	0.090
1.75	0.098
2.00	0.106
2.10	0.114
2.40	0.130
2.70	0.147
3.00	0.159
3.40	0.187
3.90	0.213
4.90	0.266

9.0 Application Timing

Pyroxlt HL may be applied preplant surface, preplant incorporated, preemergence, early postemergence, postemergence-directed (layby), or in the fall. Refer to the **Crop-specific Information** section for specific application instructions (timings, rates, restrictions and precautions) by crop.

Preplant Surface Application. Apply **Pyroxlt HL** alone or in tank mix within 45 days of planting. If weeds are present at the time of application, use additional weed control methods to control emerged weeds.

Preplant Incorporated (PPI) Application. Incorporate **Pyroxlt HL** into the upper (1 to 2 inches) soil surface within 14 days of planting. Deeper incorporation may increase the potential for crop injury and also may result in reduced weed control. Use appropriate equipment for uniform shallow incorporation, including a field cultivator, harrow, rolling cultivator, or finishing disc.

Preemergence Surface Application. After planting and before crop emergence, apply a uniform broadcast treatment to the soil surface. Apply **Pyroxlt HL** only to a uniform seedbed which is firm and free of clods, cracks, excess trash (previous crop residue), and weed growth. If weeds are present at the time of the application, use additional weed control methods to control emerged weeds.

Early Postemergence Application. **Pyroxlt HL** must be applied and activated before weed seedling emergence or in a tank mixture that controls emerged weeds. **Pyroxlt HL** will not control emerged weeds. Weeds that are already emerged at the time of application must be controlled with cultivation, tank mix or sequential application of another herbicide labeled for postemergence control of the target weeds in the crop.

Postemergence-directed (Layby) Application.

Pyroxlt HL must be applied as a directed spray between crop rows and activated before weed seedling emergence or in a tank mix that controls emerged weeds. **Pyroxlt HL** will not control emerged weeds. Weeds that are already emerged at the time of application must be controlled with cultivation, tank mix or sequential application of another herbicide labeled for postemergence control of the target weeds in the crop.

Fall/Winter Application for controlling weeds germinating in the fall, or winter weeds. **Pyroxlt HL** may be broadcast surface applied in the fall or winter after crop harvest. **DO NOT** apply to frozen or snow-covered soil. Tillage operations may be conducted before or after applying **Pyroxlt HL**. If tillage is used following an application, tillage must be shallow (no more than 2-inches deep) to uniformly incorporate the herbicide into the upper soil surface.

10.0 Application Methods and Equipment

Pyroxlt HL may be applied by aerial or ground application or by chemigation application via sprinkler or drip irrigation.

Thorough spray coverage is required for optimum weed control and can be improved with proper nozzle and spray volume selection. Use and configure application equipment to provide an adequate spray volume, an accurate and uniform distribution of spray droplets over the treated area. Adjust equipment to maintain continuous agitation during spraying with good mechanical or bypass agitation. Avoid overlaps that will increase rates above the use rates specified in this label.

Pyroxlt HL may be applied using water or sprayable fluid nitrogen fertilizer solutions as the spray carrier. **DO NOT** apply this product without dilution in a spray carrier. Additionally, **Pyroxlt HL** may be impregnated on and applied with dry bulk fertilizer.

Aerial Spray Carrier Volume. Use 3 or more gallons of water per acre. The actual minimum spray volume per acre is determined by the spray equipment used. Use adequate spray volume to provide accurate and uniform distribution of spray particles over the treated area.

Ground Spray Carrier Volume. Use 5 or more gallons of water per treated acre or 15 or more gallons of sprayable fluid nitrogen fertilizer per treated acre for weed control application.

10.1 Spray Drift Management

10.1.1 Mandatory Spray Drift Management
Aerial Applications • DO NOT release spray at a height greater than 10 ft above the vegetative canopy, unless a greater application height is necessary for pilot safety. • For all applications, applicators are required to use a medium to ultra coarse spray droplet size (ASABE S572.1). • The boom length must not exceed 65% of the wing- span for airplanes or 75% of the rotor blade diameter for helicopters. • Applicators must use 1/2 swath displacement upwind at the downwind edge of the field. • Nozzles must be oriented, so the spray is directed toward the back of the aircraft. • DO NOT apply when wind speeds exceed 10 miles per hour at the application site. • DO NOT apply during temperature inversions.
Ground Applications • Apply with the nozzle height advised by the manufacturer, but no more than 3 feet above the ground or crop canopy. • For all applications, applicators are required to use a medium to ultra coarse spray droplet size (ASABE S572.1). • DO NOT apply when wind speeds exceed 10 miles per hour at the application site. • DO NOT apply during temperature inversions.
10.1.2 Spray Drift Advisories
The applicator is responsible for avoiding off-site spray drift. Be aware of nearby non-target sites and environmental conditions.
10.1.3 Information on Droplet Size
An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.
10.1.4 Controlling Droplet Size
Ground Boom Volume Volume. Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate. Pressure. Use the lowest spray pressure advised for the nozzle to produce the target spray volume and droplet size. Spray Nozzle. Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift. Aircraft Adjust Nozzles Follow nozzle manufacturer's directions for setting up nozzles. Generally, to reduce fine droplets, nozzles must be oriented parallel with the airflow in flight.
10.1.5 Boom Height - Ground Boom
Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom must remain level with the crop and have minimal bounce.
10.1.6 Release Height - Aircraft
Higher release heights increase the potential for spray drift. When applying aerially to crops, DO NOT release spray at a height greater than 10 feet above the crop canopy, unless a greater application height is necessary for pilot safety.
10.1.7 Shielded Sprayers
Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

10.1.8 Wind
Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.
10.1.9 Temperature and humidity
When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.
10.1.10 Temperature inversions
Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

10.2 Types of application

10.2.1 Chemigation Application via Sprinkler and Drip Irrigation Systems

Pyroxlt HL may be applied as a chemigation treatment through sprinkler irrigation systems. Apply this product ONLY through a sprinkler irrigation system of the following type: center pivot, end tow, hand move, lateral move, side (wheel) roll, or solid set. **DO NOT** apply this product through any other type of sprinkler irrigation system.

Pyroxlt HL may also be applied as a chemigation treatment through drip irrigation systems. All chemigation precautions mentioned in this label for sprinkler irrigation systems also apply for drip irrigation systems.

Application may be made alone or in tank mixtures with other herbicides registered for use in specified sprinkler or drip irrigation systems. Application must be made within specific crop stage timings and product use rates given in the container label Directions For Use.

Uniform distribution of **Pyroxlt HL** treated irrigation water is the sole responsibility of the applicator and is required to avoid crop injury, lack of herbicide effectiveness, or illegal pesticide residue in the crop. If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.

Proper calibration is the responsibility of the applicator. The system must be properly calibrated (with water only) to ensure the amount of **Pyroxlt HL** applied corresponds to the specified rate. Apply **Pyroxlt HL** in volume minimums of 0.33 to 0.67 inch of water using the lower volume for coarse-texture soils and the higher volume for fine-texture soils. Application made in high volumes of water (more than 1 inch) may result in reduced weed control.

Meter herbicide dilution into irrigation water through the entire time of water application for center pivot and lateral move sprinkler systems. For solid-set and hand-move sprinkler irrigation systems and drip irrigation systems, apply **Pyroxlt HL** through the system at the beginning of the set; then follow with additional water to reach volume minimums as listed by soil type. To increase calibration accuracy of injection metering equipment, dilute **Pyroxlt HL** in a minimum of 3 parts water to 1 part **Pyroxlt HL**. Maintain agitation in injection nurse tanks to keep a uniform herbicide suspension during application.

Special Restrictions for Chemigation:

- 1) **DO NOT** apply when wind speed favors drift beyond the area intended for treatment.
- 2) **DO NOT** connect an irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
- 3) A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments if the need arises.
- 4) Tail water (runoff water) from chemigation that contains **Pyroxlt HL** needs be recirculated and/or contained in the field in a cistern or holding reservoir from the initial application and/or used only on adjacent, approved

crops for which **Pyroxlt HL** is registered for this type of application.

- 5) The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. It must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 6) The sprinkler chemigation system must contain a functional check valve, vacuum-relief valve, and
- 7) low-pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow. In addition, systems must use a metering pump, including a positive displacement injection pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- 8) The sprinkler chemigation system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 9) The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

10.2.2 Chemigation systems connected to public water systems:

- 1) Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2) Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system needs be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- 3) All chemigation systems connected to public water systems must also follow restrictions listed in the preceding section.

10.2.3 Ground Application (Dry Bulk Fertilizer)

Impregnation or coating may be conducted by in-plant bulk or on-board systems. Perform the mixing operation in well-ventilated areas.

All individual state regulations relating to dry bulk granular fertilizer blending, registration, labeling, and application are the responsibility of the individual and/or company selling the herbicide/fertilizer mixture.

Pyroxlt HL may be impregnated on many commonly used dry fertilizers. **DO NOT** impregnate on ammonium nitrate, fertilizers containing ammonium nitrate, potassium nitrate, sodium nitrate, or powdered limestone.

Fertilizer application rates of at least 200 lbs to 700 lbs per acre of herbicide and fertilizer blend will provide adequate distribution or coverage of **Pyroxlt HL** across the soil surface. Application of impregnated fertilizer must be made uniformly to the soil to prevent possible crop injury and offer satisfactory weed control. Impregnated fertilizer spread at half rate and overlapped to obtain a full rate offers a more uniform distribution. A shallow (less than 2 inches) incorporation is desirable for improved weed control. Deeper incorporation dilutes the herbicide layer near the soil surface and may result in unsatisfactory weed control.

To calculate the herbicide rate when using dry bulk fertilizer applications:

$$\frac{\text{fl oz of Pyroxlt HL}}{\text{per acre X 2000}} = \text{fl oz of Pyroxlt HL for 1 ton of fertilizer}$$

pounds fertilizer per acre

To impregnate **Pyroxlt HL** on bulk fertilizer, use a closed rotary-drum mixer or other commonly used dry bulk fertilizer blender equipped with suitable spray equipment. Mix **Pyroxlt HL** with sufficient water to form a sprayable slurry mixture. Spray nozzles must be directed to provide uniform fertilizer coverage while avoiding spray contact with mixing equipment. Nonuniform impregnation can cause crop injury or unsatisfactory performance. Spray herbicide mixture onto fertilizer after blending has started. Addition of a suitable drying agent may be necessary if the fertilizer and herbicide blend is too wet for uniform application due to high humidity, high urea concentration, or low fertilizer use rate. Slowly add the drying agent to the blend until a flowable mixture is obtained. Drying agents are not intended for use with on-board impregnation systems.

Under some conditions, fertilizer impregnated with **Pyroxlt HL** may clog air tubes or deflector plates on pneumatic application systems. Mineral oil may be added to **Pyroxlt HL** before blending with fertilizer to reduce plugging. **DO NOT** use drying agents when mineral oil is used. To avoid separation of **Pyroxlt HL** and mineral oil mixes in cold temperatures, keep mixture heated or agitated before blending with fertilizer. Mineral oil may be used with implant blending stations or with on-board injection systems.

Uniformly apply the treated fertilizer with accurately calibrated and proper equipment immediately after impregnation to avoid lump formation and spreading difficulties.

Accurate calibration of fertilizer application equipment and uniform fertilizer distribution is essential for satisfactory weed control.

11.0 Additives

Pyroxlt HL is formulated to provide optimal residual preemergence weed control. However, several tank mixes with **Pyroxlt HL** may require an adjuvant to improve burndown of emerged weeds. Therefore, an adjuvant may be used with **Pyroxlt HL** tank mixes that are applied fall, preplant, preemergence, or early postemergence. Follow the adjuvant directions for the tank mix partner of **Pyroxlt HL**.

12.0 Crop Rotation

- **Crop rotation intervals** - Use Table 5 to determine the proper interval between **Pyroxlt HL** application and the planting of rotational crops. Determine the crop rotation interval for tank mix products and use the most restrictive interval of all products applied.

Table 5. Rotational Crop Planting Intervals by Pyroxlt HL Application Rate

Crop	Pyroxlt HL Use Rate (fl oz/A)			
	1.0	2.0	3.0	3.9
	Rotational Crop Interval (months after application)			
Alfalfa	10	10	10	10
Beans, edible dry	11	11	11	11
Beans, edible-podded and succulent shelled	11	11	11	11
Bulb Onion	2	4	4	4
Canola (Rapeseed)	12	12	15	18
Chickpea	1	1	1	2
Corn	0	0	0	0
Cotton	1	2		
Flax	2		6	8
Garlic	0	0	4	4
Grain sorghum	6	6	10	12
Cool-season Grasses grown for seed*	11**	11**	18	18
Warm-season Grasses grown for seed	18	18	18	18
Green Onion	4	6	8	12
Lentil	1	1	2	4
Peanut	1	2	4	4
Peas, edible-podded and succulent shelled	9	9	11	11
Peas, field (dry)	1	1	1	2
Potato	1	2	3	3
Rice	10	12	18	24
Safflower	1	2	3	3
Small grains (other than wheat)	11	11	11	18
Soybean	0	0	0	4
Sugar beet	12	12	15	15
Sugarcane	4	4	4	4
Sunflower	1	2	3	3
Sweet potato	4	4	4	9
Tobacco (grown in states of FL, GA, KY, NC, SC, TN, and VA)	9	9	12	12
Tobacco (grown in all other states)	18	18	18	18
Wheat	1	1	4	6
Other Crops	18	18	18	18

* Only when grown in states of Idaho, Oregon and Washington, for all other states see rotational crop intervals for "Other Crops".

** An 11 month rotational crop interval only when greater than 15 inches of precipitation (rainfall/irrigation) has occurred from time of application to planting of grass grown for seed. If less than 15 inches of precipitation has occurred, the rotational crop interval is 18 months.

13.0 Resistance Management and Integrated Pest Management

Herbicide Resistance Management

Pyroxlt HL acts to inhibit very long-chain fatty acid synthesis as a Group 15 herbicide. It is a root-and- shoot growth inhibitor that controls susceptible germinating seedlings before or soon after they emerge from the soil. Any weed population may contain or develop plants naturally resistant to **Pyroxlt HL** and other Group 15 herbicides. Weed species with resistance to Group 15 may eventually dominate the weed population if Group 15 herbicides are used repeatedly in the same field or in successive years as the primary method of control for

targeted species. This may result in partial or total loss of control of those species by **Pyroxlt HL** or other Group 15 herbicides.

To delay herbicide resistance, consider:

- Avoiding the consecutive use of **Pyroxlt HL** or other target-site-of-action Group 15 herbicides that have a similar target site of action on the same weed species.
- Using tank mixes or premixes with herbicides from different target-site-of-action groups as long as the involved products are all registered for the same use, have different sites of action, and are both effective at the tank mix or prepack rate on the weed(s) of concern.
- Basing herbicide use on a comprehensive IPM (Integrated Pest Management) program including cultural and mechanical methods.
- Monitoring treated weed populations for loss of field efficacy, and control of escapes with effective alternative herbicides or mechanical methods.
- Identify weeds present in the field through scouting and field history and understand their biology. The weed control program needs to consider all of the weeds present.
- Scout fields prior to application to identify the weed species present and their growth stage to determine if the intended application will be effective.
- Scout fields after application to verify the treatment was effective.
- Suspected herbicide-resistant weeds may be identified by these indicators:
 - 1) Failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds;
 - 2) A spreading patch of non-controlled plants of a particular weed species; and
 - 3) Surviving plants mixed with controlled individuals of the same species.
- If resistance is suspected, treat weed escapes with an herbicide with a different MOA and/or use non-chemical methods to remove escapes, as practical, with the goal of preventing further seed production.
- Report any incidence of non-performance of this product against a particular weed species to your local Winfield Solutions, LLC representative.
- Contacting your local extension specialist, certified crop advisors, and/or manufacturer for herbicide resistance management and/or integrated weed management directions for specific crops and resistant weed biotypes.

14.0 Mixing Instructions and Compatibility

It is the pesticide user's responsibility to ensure that all products in the mixtures are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

The product may be applied as a tank mix alone; if tank-mixed with another product, ensure compliance with the label directions of that product. Use **Pyroxlt HL** as part of a weed control program for a broader spectrum of weed control and/or control of emerged weeds.

Mixing Instructions

Shake **Pyroxlt HL container well before use.**

Maintain agitation throughout mixing and application until spraying is completed.

- 1) **Water** - Fill tank 1/2 to 3/4 full with clean water and start agitation.
- 2) **Inductor** - If an inductor is used, rinse it thoroughly after each component has been added.
- 3) **Products in PVA bags** - Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
- 4) **Water-soluble additives** (dry and liquid fertilizers including ammonium sulfate or urea ammonium nitrate)
- 5) **Water-dispersible products** (including dry flowables, wettable powders, suspension concentrates, or suspo-emulsions) - Add **Pyroxlt HL** at this point in the mixing process.

6) Water-soluble products

7) Emulsifiable concentrates (including methylated seed oil adjuvants)

8) Remaining quantity of water

If the spray mixture is allowed to settle for any period of time, thorough agitation is essential to resuspend the mixture before spraying is resumed. Continue agitation while spraying.

Compatibility

Before mixing components, always perform a compatibility jar test.

- 1) For 20 gallons per acre spray volume, use 3.3 cups (800 mL) of water. For other spray volumes, adjust rates accordingly. Only use water from the intended source at the source temperature.
- 2) Add components in the sequence indicated in the mixing order using 2 teaspoons for each pound or
- 3) 1 teaspoon for each pint of label rate per acre.
- 4) Always cap the jar and invert 10 cycles between component additions.
- 5) When the components have all been added to the jar, let the solution stand for 15 minutes.
- 6) Evaluate the solution for uniformity and stability. The spray solution must not have free oil on the surface, or fine particles that precipitate to the bottom, or thick (clabbered) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent. If the solution is then compatible, use the compatibility agent as directed on its label. If the solution is still incompatible, **DO NOT** mix the ingredients in the same tank.

15.0 Equipment Clean Up

Clean application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer's directions. Triple rinse the equipment before and after applying **PyroxIt HL**.

16.0 Use Restrictions

- **Maximum use rate** - Refer to Crop-specific Information section for maximum application use rates of **PyroxIt HL** in each crop and use pattern.
- Refer to Crop-specific Information for additional crop use restrictions.
- **DO NOT** contaminate irrigation ditches or water used for domestic purposes.
- Irrigation - **DO NOT** use flood irrigation to apply, activate, or incorporate **PyroxIt HL**.
- **PyroxIt HL is not for sale, distribution, or use in Nassau and Suffolk counties in New York State.**
- **Emergency replanting intervals** - If a labeled crop treated with **PyroxIt HL** is lost to crop failure (because of environmental factors including drought, frost, hail, etc.), the crop may be replanted immediately. However **DO NOT** repeat application of **PyroxIt HL** after crop failure. A sequential application can be made as long as the maximum cumulative rate for the crop and soil per year is not exceeded.

17.0 Crop-specific Information

Read product information, mixing, application, weeds controlled, and additive instructions in preceding sections of the label.

Celery

Pyroxlt HL may be applied to transplanted celery as an early post-transplant application for residual preemergence control of listed weeds (Table 1). Before applying to celery, verify with your local seed company (supplier) the selectivity of **Pyroxlt HL** on your variety to avoid potential injury.

Application Rate

Apply **Pyroxlt HL** in transplanted celery at the residual rates provided in Table 6.

Table 6. Application instructions and restrictions of Pyroxlt HL in Celery

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)	Use Instructions
	Muck or Peaty Muck Soils (greater than 20% organic matter)	
Early post-transplant	2.0	Apply 2.0 fl oz/A of Pyroxlt HL as a broadcast spray to the soil surface within 30 days of planting. Early Post-transplant Application (1 to 6 days after transplanting) Apply Pyroxlt HL at the use rates specified in this Table as a broadcast spray to the soil surface 1 to 6 days after transplanting. Apply Pyroxlt HL only to a uniform transplant bed which is firm and free of clods and cracks. The transplant bed must be prepared to ensure good transplant row closure.
Crop-specific Restrictions		
• DO NOT apply more than 2.0 fl oz/A of Pyroxlt HL (0.106 lb ai/A of pyroxasulfone) in a single application. • Maximum number of applications per year: 1 • DO NOT apply more than 2.0 fl oz/A of Pyroxlt HL (0.106 lb ai/A of pyroxasulfone) per year. • There is no required preharvest interval for Pyroxlt HL when applied after transplanting. • DO NOT apply Pyroxlt HL seven or more days after transplanting. • Only apply Pyroxlt HL to transplanted celery. • Only apply Pyroxlt HL to celery grown on muck or peaty muck soils with greater than 20% organic matter.		
Precautions		
• The use of Pyroxlt HL may result in temporary growth suppression, leaf burn, and/or other injury or stand reduction in transplanted celery under stressful conditions including inadequate or excessive moisture, extended periods of water-saturated soil occur during early transplant growth and development, cool and hot temperatures, compacted soils, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.		

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application.

Corn

Feld corn (grown for grain, seed, or silage), popcorn, and sweet corn (grown for fresh, processing, or seed).

Pyroxlt HL may be applied preplant surface, preplant incorporated, preemergence, or early postemergence to corn for residual preemergence control of listed weeds (Table 1). Before applying to seed corn, sweet corn, or popcorn, verify with your local seed company (supplier) the selectivity of **Pyroxlt HL** on your inbred line or hybrid to avoid potential injury.

Application Rates

Apply **Pyroxlt HL** in corn at the residual rates provided in Table 7.

Table 7. Application instructions and restrictions of Pyroxlt HL in Corn

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preplant surface or Preplant incorporated	1.5 to 2.7	2.0 to 3.0	2.4 to 3.9	Early Preplant Surface Application (within 15 to 45 days of planting) Use application rates as specified when making preplant surface applications, using the highest application rate for a given soil texture. Preplant surface applications are not advised on coarse soils, in areas where average annual rainfall (or rainfall plus irrigation) typically exceeds 40 inches, or for popcorn or sweet corn. Preplant Surface or Preplant Incorporated Application (within 14 days of planting) Apply Pyroxlt HL at the use rates specified as a broadcast spray to the soil surface or incorporated before planting on all soil types.
	1.5 to 2.7	2.0 to 3.0	2.4 to 3.9	
Preemergence	1.5 to 2.7	2.0 to 3.0	2.4 to 3.9	Apply Pyroxlt HL at use rates specified as a broadcast spray to the soil surface after planting and before crop emergence.
Early postemergence	1.0 to 2.7	1.5 to 3.0	2.0 to 3.9	Apply Pyroxlt HL at use rates specified as a broadcast spray to corn at spiking up to the V8 stage (visible eighth leaf collar).
Sequential Application	If a sequential application program of Pyroxlt HL is used (e.g. fall application followed by spring application, or sequential applications in the spring), the maximum combined rate of Pyroxlt HL that may be applied in corn per year is 2.7 fl oz/A (0.146 lb ai/A of pyroxasulfone) on coarse soils or 4.9 fl oz/A (0.266 lb ai/A of pyroxasulfone) on all medium-to-fine soils.			
Crop-specific Restrictions				
• On coarse soil: – DO NOT apply more than 2.75 fl. oz./A of Pyroxlt HL (0.146 lb. ai/A of pyroxasulfone) in a single application or as a maximum cumulative amount from sequential applications in corn per year. • On medium soil: – DO NOT apply more than 3 fl. oz./A of Pyroxlt HL (0.159 lb. ai/A of pyroxasulfone) in a single application. – DO NOT apply more than a maximum cumulative amount of 4.9 fl. oz./A of Pyroxlt HL (0.266 lb. ai/A pyroxasulfone) from sequential applications in corn per year.				

- **On fine soil:**
 - **DO NOT** apply more than 3.9 fl. oz./A of **PyroxIt HL** (0.213 lb. ai/A of pyroxasulfone) in a single application.
 - **DO NOT** apply more than a maximum cumulative amount of 4.9 fl. oz./A of **PyroxIt HL** (0.266 lb. ai/A pyroxasulfone) from sequential applications in corn per year.
- Maximum number of applications per year: 2 (when applying less than single application maximum rate)
- Separate sequential applications by at least 14 days.
- **DO NOT** harvest sweet corn ears for human consumption less than 37 days after application of PyroxIt HL.

Precautions

- Seeding depth - Corn seed must be planted a minimum 1-inch deep.

¹ Refer to Table 3 for definition of soil-texture groups.

PyroxIt HL may be applied in a single application or in sequential applications.

Fallow

PyroxIt HL may be used as a residual treatment to control listed weeds at any time of the year during the fallow period following crop harvest and before the following crop is planted (see paragraph below pertaining to rotational crop planting intervals).

Table 8. Application instructions and restrictions of PyroxIt HL

USE INSTRUCTIONS
Application Rate and Timing
Apply PyroxIt HL as a broadcast spray at 1.0 to 3.9 fl oz/A. Sequential applications may be made with a minimum of 30 days between applications. Best product performance is obtained when weeds are not emerged before application. Specific rotational crop planting intervals must be observed between an application of PyroxIt HL and planting of the following crops (see Table 5 for rotational crop planting intervals).
Crop-specific Restrictions
• DO NOT apply more than 3.9 fl oz/A of PyroxIt HL (0.213 lb ai/A pyroxasulfone) in a single application. • DO NOT apply more than a maximum cumulative amount of 4.9 fl oz/A of PyroxIt HL (0.266 lb ai/A of pyroxasulfone) from sequential applications per year. • Maximum number of applications per year: 3 (when applying rates less than single application maximum rate) • Separate sequential applications by at least 30 days.

Mint* (Peppermint and Spearmint)

* Mint (peppermint and spearmint tops) includes peppermint and spearmint harvested for fresh mint leaves or for stems and leaves processed into mint oil. Peppermint and spearmint tops hereafter referred to as mint.

For use only in Idaho, Indiana, Michigan, Montana, Oregon, Utah, Washington, and Wisconsin.

PyroxIt HL may be applied to dormant established mint for residual preemergence control of listed weeds (Table 1).

Application Rate

Apply **Pyroxlt HL** in Mint at the residual rates provided in Table 9.

Table 9. Application instructions and restrictions of Pyroxlt HL in Mint

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preemergence Single application	DO NOT USE	1.75	1.75	Apply Pyroxlt HL at the specified use rate as a broadcast spray to dormant established mint before target-weed germination.
Crop-specific Restrictions:				
• DO NOT apply more than 1.75 fl oz/A of Pyroxlt HL (0.098 lb ai/A of pyroxasulfone) in a single application. • Maximum number of applications per year: 1 • DO NOT apply more than 1.75 fl oz/A of Pyroxlt HL (0.098 lb ai/A of pyroxasulfone) per year. • DO NOT apply Pyroxlt HL to mint in the first year of growth and establishment. • DO NOT apply Pyroxlt HL to mint that has broken dormancy. Application to mint that is near dormancy break can result in crop injury. Risk of crop injury increases the closer application is to mint dormancy break. • DO NOT apply Pyroxlt HL to mint stands that have been weakened by age, disease, cold weather, excessive moisture, or other factors that reduce crop vigor. Mint growing under stress is more susceptible to herbicide damage. • DO NOT apply Pyroxlt HL to mint grown on soils with less than 1% organic matter. • DO NOT apply Pyroxlt HL to mint grown on coarse soils. • There is no required (preharvest) interval between a dormant application of Pyroxlt HL and the harvest of mint. • DO NOT use roots from Pyroxlt HL-treated mint for human consumption. Roots treated with Pyroxlt HL can be used for root propagation.				
Precautions				
After Pyroxlt HL application, temporary crop injury may be observed in the growing season as mint breaks dormancy and begins to grow. The use of Pyroxlt HL may result in growth suppression of mint if extreme conditions of high rainfall, high winds, and/or extended periods of water-saturated soil occur right before or soon after mint breaks dormancy.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application.

Perennial Cool-season Grasses Grown for Seed Production

For use only Oregon and Washington.

Pyroxlt HL may be applied to established (defined as planted in fall or spring which has gone through a first grass seed harvest or spring-planted grass that have developed at least 8-tillers) stands of perennial cool-season grasses (including fine fescue, orchard grass, perennial ryegrass, and tall fescue) grown for seed production for residual preemergence control of listed weeds (Table 1). Before applying to perennial cool-season grass grown for seed production, verify with your local seed company (supplier), university extension specialist (e.g., weed scientist, county agent, etc.), or Winfield Solutions, LLC representative the selectivity of **Pyroxlt HL** on your variety to avoid potential injury.

Application Rate

Apply **Pyroxlt HL** in Perennial Cool-season Grasses Grown for Seed Production at the residual rates provided in Table 10.

Table 10. Application instructions and restrictions of Pyroxlt HL

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Established Stands	1.75			Apply Pyroxlt HL at the use rate specified in this Table as a broadcast spray to the soil surface in postharvest grass during regrowth at the beginning of significant fall rains or in winter by January 31, or as a fall application to spring-planted grass crops that have developed at least 8-tillers. Apply Pyroxlt HL before target-weed germination.
Fall Application in Carbon-Planting of Grass Seed	1.5 to 1.75			Apply Pyroxlt HL as a broadcast spray to soil surface immediately after grass seed has been planted using standard carbon-planting practices (i.e., activated carbon applied at minimum 300 lbs/acre in minimum one inch band over grass seed row). Apply Pyroxlt HL before target weed germination.
Crop-specific Restrictions				
• DO NOT apply more than 1.75 fl oz/A of Pyroxlt HL (0.098 lb ai/A of pyroxasulfone) in a single application. • Maximum number of applications per year: 1 • DO NOT apply more than 1.75 fl oz/A of Pyroxlt HL (0.098 lb ai/A of pyroxasulfone) per year. • DO NOT apply Pyroxlt HL in combination with other pyroxasulfone-containing products in perennial cool-season grasses grown for seed production. • Preharvest Interval (PHI) for seed of perennial grasses 60 days. • Pre-grazing Interval (PGI) to livestock for Pyroxlt HL-treated grass forage and hay - 60 days.				
Precautions				
Application made in periods of cold temperatures that temporarily limit normal crop growth or in extended cold temperature periods that initiate winter dormancy in grass crops may result in injury.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application.

Safflower

Pyroxlt HL may be applied preemergence to safflower for residual preemergence weed control. Before applying to safflower, verify with your local seed company (supplier), university extension specialist (e.g., weed scientist, county agent, etc.), or Winfield Solutions, LLC representative the selectivity of **Pyroxlt HL** on your hybrid/variety to avoid potential injury.

Application Rate

Apply **Pyroxlt HL** in safflower at the residual rates provided in Table 11.

Table 11. Application instructions and restrictions of Pyroxlt HL in Safflower

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preemergence	DO NOT USE	1.0 to 1.5	1.0 to 1.5	Apply Pyroxlt HL at use rates specified in this table as a broadcast spray to the soil surface after planting and before crop emergence.
Crop-specific Restrictions				
• DO NOT apply more than 1.5 fl oz/A of Pyroxlt HL (0.08 lb ai/A of pyroxasulfone) in a single application. • Maximum number of applications per year: 1 • DO NOT apply more than 1.5 fl oz/A of Pyroxlt HL (0.08 lb ai/A of pyroxasulfone) per year. • DO NOT apply Pyroxlt HL preplant or preplant incorporated to safflower. • DO NOT apply Pyroxlt HL to safflower at cracking or cotyledon stage. • There is no required (preharvest) interval between a preemergence application of Pyroxlt HL and safflower harvest.				
Precautions				
• Safflower seed quality - Plant high quality seed. • Seedbed preparation - The seedbed MUST be prepared to ensure good seed row closure and soil coverage of the seed. • The use of Pyroxlt HL may result in temporary growth suppression or leaf burn in safflower under stressful conditions including inadequate or excessive soil moisture or rainfall, cool and hot temperatures, compacted or crusted soils, improper planting depth, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application.

Soybean

Pyroxlt HL may be applied preplant surface, preplant incorporated, preemergence, early postemergence, or in the fall to soybean for residual preemergence control of listed weeds (Table 1). Before applying to soybean, verify with your local seed company (supplier) the selectivity of **Pyroxlt HL** on your variety to avoid potential injury.

Application Rate

Apply **Pyroxlt HL** in soybean at the residual rates in Table 12.

Table 12. Application instructions and restrictions of Pyroxlt HL in Soybean

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preplant Surface or Preplant Incorporated	1.5 to 2.1	2.0 to 3.0	2.4 to 3.4	Early Preplant Surface Application (within 15 to 45 days of planting) Use the highest application rate for a given soil texture. Preplant surface applications are not advised on coarse soils or in areas where average annual rainfall (or rainfall plus irrigation) typically exceeds 40 inches. Preplant Surface or Preplant Incorporated Application (within 14 days of planting) Apply Pyroxlt HL as a broadcast spray to the soil surface or incorporated before planting on all soil types.
Fall/Winter Application for controlling weeds germinating in the fall, or winter annual weeds				Pyroxlt HL may be broadcast surface applied in the fall or winter to control winter annual weeds and other weeds germinating in the fall. Sequential preemergence and/or postemergence applications can be made, but DO NOT exceed the maximum cumulative rate allowed by soil type per year.
Preemergence Surface Application				Apply Pyroxlt HL as a broadcast spray to the soil surface after planting and before crop emergence.
Early Postemergence Application	1.0 to 2.1	1.5 to 3.0	2.0 to 3.4	Apply Pyroxlt HL at use rates specified in this Table as a postemergence broadcast spray to soybean from emergence (cracking stage) to sixth-trifoliate leaf stage. Pyroxlt HL applications to emerged soybeans may result in temporary leaf burn and stunting, but a reduction in soybean yield is unexpected. Tank mixes of Pyroxlt HL with other crop protection products or adjuvants may significantly enhance this effect. Depending upon growing conditions, recovery from this injury begins immediately but may take several weeks for the injury to dissipate entirely.
Sequential Application	2.1	3.4	3.4	If a sequential application program of Pyroxlt HL is used (e.g. fall application

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
				followed by spring application, or sequential applications in the spring), the maximum combined rate of Pyroxlt HL that may be applied as specified per year.
Crop-specific Restrictions				
• On coarse soil - DO NOT apply more than 2.1 fl oz/A of Pyroxlt HL (0.112 lb ai/A of pyroxasulfone) in a single application or as a maximum cumulative amount from sequential applications in soybean per year. • On medium soil - DO NOT apply more than 3.0 fl oz/A of Pyroxlt HL (0.159 lb ai/A of pyroxasulfone) in a single application. - DO NOT apply more than a maximum cumulative amount of 3.4 fl oz/A of Pyroxlt HL (0.186 lb ai/A pyroxasulfone) from sequential applications in soybean per year. • On fine soil - DO NOT apply more than 3.4 fl oz/A of Pyroxlt HL (0.186 lb ai/A of pyroxasulfone) in a single application or as a maximum cumulative amount from sequential applications in soybean per year. • Maximum number of applications per year: 2 (when applying rates less than single application maximum rate) • Separate sequential applications by at least 14 days. • There is no required (preharvest) interval between a preplant, preemergence, or early postemergence application of Pyroxlt HL and the harvest of soybean grain.				
Precautions				
• Seeding depth - Soybean seed must be planted a minimum 1-inch deep. • The use of Pyroxlt HL may result in temporary growth suppression in soybean if extreme conditions of high rainfall and extended periods of water-saturated soil occur during soybean germination or early seedling development.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application or in sequential applications.

Sunflower

Pyroxlt HL may be applied preplant surface, preemergence, or early postemergence to sunflower for residual preemergence control of listed weeds (Table 1). Before applying to sunflower, verify with your local seed company (supplier), university extension specialist (e.g. weed scientist, county agent, etc.), or Winfield Solutions, LLC representative the selectivity of **Pyroxlt HL** on your hybrid/variety to avoid potential injury.

Application Rate

Apply **Pyroxlt HL** in sunflower at the residual rates provided in Table 13.

Table 13. Application instructions and restrictions of Pyroxlt HL in Sunflower

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preplant Surface or Preplant Incorporated	1.0 to 1.5 1.0 to 1.5	1.5 to 3.0 1.5 to 3.0	3.0 to 3.9 3.0 to 3.9	Early Preplant Surface Application (within 15 to 45 days of planting) Use application rates in this table when making preplant surface applications, using the highest application rate within the rate range for a given soil texture. Preplant surface applications are not advised on coarse soils or in areas where average annual rainfall (or rainfall plus irrigation) typically exceeds 40 inches. Preplant Surface Application (within 14 days of planting) Apply Pyroxlt HL at the use rates specified in this table as a broadcast spray to the soil surface before planting on all soil types. Preemergence Surface Application Apply Pyroxlt HL at use rates specified in Table 18 as a broadcast spray to the soil surface after planting and before crop emergence.
Fall/Winter Application for controlling weeds germinating in the fall, or winter annual weeds				Pyroxlt HL may be broadcast surface applied in the fall or winter to control winter annual weeds and other weeds germinating in the fall. Use on coarse, medium, or fine soils at rates listed for the preplant surface timing. Sequential preemergence and/or postemergence applications can be made, but DO NOT exceed the maximum cumulative rate allowed by soil type per year. See the main Application Timings section of this label for further application instructions.
Preemergence Surface Application	1.0 to 1.5	1.5 to 3.0	3.0 to 3.9	

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Early Postemergence Application	1.0 to 1.5	1.0 to 2.0	1.0 to 2.0	Apply Pyroxlt HL as a broadcast spray to sunflower from first true leaf (leaf at least 1.5 inches long, V1 stage) through eight leaf stage (V8). Pyroxlt HL applications to emerged sunflower may result in temporary leaf burn and stunting, but a reduction in sunflower yield is unexpected. Adjuvants may be applied with Pyroxlt HL when making early postemergence applications.
Sequential Application	1.5	4.9	4.9	If a sequential application program of Pyroxlt HL is used (e.g. fall application followed by spring application, or sequential spring applications including preplant surface or preemergence application followed by postemergence application or consecutive postemergence applications), the maximum combined rate of Pyroxlt HL that may be applied as specified per year.
<u>Crop-specific Restrictions</u>				
• On coarse soil - DO NOT apply more than 1.5 fl oz/A of Pyroxlt HL (0.08 lb ai/A of pyroxasulfone) in a single application or as a maximum cumulative amount from sequential applications in sunflower per year. • On all soils other than coarse: • DO NOT apply more than 3.9 fl oz/A of Pyroxlt HL (0.213 lb ai/A of pyroxasulfone) in a single application. • DO NOT apply more than a maximum cumulative amount of 4.9 fl oz/A of Pyroxlt HL (0.266 lb ai/A pyroxasulfone) from sequential applications in sunflower per year. • Maximum number of applications per year: 3 (when applying rates less than single application maximum rate) • Separate sequential applications by at least 14 days. • DO NOT apply Pyroxlt HL preplant incorporated to sunflower. • DO NOT apply Pyroxlt HL to sunflower at cracking or cotyledon stage. • DO NOT apply a tank mix of Pyroxlt HL and imazamox-containing herbicides on ALS-resistant sunflower hybrids/varieties. • There is no required (preharvest) interval between a preplant and preemergence application of Pyroxlt HL and sunflower harvest. • DO NOT apply Pyroxlt HL postemergence less than 60 days before harvest of sunflower seed.				
<u>Precautions</u>				
• Sunflower seed quality - Plant high quality seed. • Seedbed preparation - The seedbed MUST be prepared to ensure good seed row closure and soil coverage of the seed. • The use of Pyroxlt HL may result in temporary growth suppression or leaf burn in sunflower under stressful conditions including inadequate or excessive soil moisture or rainfall, cool and hot temperatures, compacted or crusted soils, improper planting depth, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application or in sequential applications.

Wheat

Pyroxlt HL may be applied preplant surface, preemergence, delayed preemergence, or early postemergence in fall-seeded or spring-seeded wheat for residual preemergence control or suppression of listed weeds (Table 2) and suppression of other listed weeds (Table 1).

Crop Response

Pyroxlt HL applied preplant surface or preemergence can cause wheat injury. Under stressful conditions (including inadequate or excessive moisture, cool or hot temperatures, compacted soils, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, low soil pH induced aluminum toxicity, or other conditions known to cause plant stress), **Pyroxlt HL** injury will be intensified.

No crop injury is expected when **Pyroxlt HL** is applied delayed preemergence or early postemergence. However, some visual wheat response is possible when **Pyroxlt HL** is applied to wheat under stressful conditions including inadequate or excessive moisture, cool or hot temperatures, compacted soils, injury from other pesticides, disease or other pest damage, mechanical injury, nutrient imbalances, or other conditions known to cause plant stress.

Wheat response is most often visible as stunting and/or discoloration of leaf tissue (e.g. chlorosis), but in its most severe form can result in stand loss and yield reduction. The greatest potential for wheat response occurs when **Pyroxlt HL** concentrates in the crop row. Unacceptable wheat response may be caused by uneven application, soil clods or disturbances, an open/cracked seed furrow that allows herbicide to directly contact the seed, or a deep seed furrow that allows herbicide concentration after a rain/irrigation event during wheat germination.

Certain wheat varieties can be more sensitive to **Pyroxlt HL**. Before applying to wheat, verify sensitivity with your local seed company (supplier), university extension specialist (e.g. wheat breeder, weed scientist, county agent, etc.), or Winfield Solutions, LLC representative.

Application Rate

Apply **Pyroxlt HL** in wheat at the residual rates in Table 14.

Table 14. Application instructions and restrictions of Pyroxlt HL in Wheat

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
Preplant surface	0.6 to 1.2	1.0 to 1.5	1.0 to 1.75	Apply Pyroxlt HL at the use rates specified in this Table as a broadcast spray to the soil surface no more than 14 days before planting on all soil types. Soil disturbance after application from planters/drills may result in herbicide incorporation that can result in unacceptable crop injury, or displacement of Pyroxlt HL that can result in inconsistent weed control. See State-specific Use Instructions for applications in Idaho, Montana, Oregon, and Washington.
Preemergence Surface Application	0.6 to 1.2	1.0 to 1.5	1.0 to 1.75	Apply Pyroxlt HL at the use rates specified in this Table after planting but before wheat spiking as a broadcast spray to the soil surface with uniform seedbed that is firm and free of clods. Ensure good seed row closure and soil coverage to avoid contact with Pyroxlt HL . As the interval from planting to application increases, the potential for crop injury decreases. See State-specific Use Instructions for applications in Idaho, Montana, Oregon, and

Application Timing	Use Rate by Soil Texture ¹ (fl. oz./A)			Use Instructions
	Coarse	Medium	Fine	
				Washington.
Delayed preemergence	0.75 to 1.0	1.0 to 1.5	1.0 to 2.0	Application Apply Pyroxlt HL at the use rates specified in this Table as a broadcast spray to the soil surface following wheat planting when 80% of germinated wheat seeds have a shoot at least 1/2-inch long until wheat spiking.
Early Postemergence Application	1.0 to 2.4	1.0 to 2.4	1.0 to 2.4	Apply Pyroxlt HL at the use rates specified in this Table as a broadcast spray to wheat at spiking up to the 4th-tiller growth stage. Pyroxlt HL will only suppress, or control labeled weeds that germinate after the early postemergence application and rainfall/irrigation activation. Apply Pyroxlt HL as early as possible after wheat emergence to prevent weed emergence.
Sequential Application	Pyroxlt HL may be applied as a sequential or split application program where a preplant, preemergence, or delayed preemergence application is followed by an early postemergence application or where multiple early postemergence applications are made. DO NOT apply more than a maximum cumulative amount of 2.4 fl oz/A (0.133 lb ai/A of pyroxasulfone) per year.			
State-specific Use Restrictions: DO NOT apply on spring wheat. DO NOT apply on coarse soils.				
Crop-specific Restrictions				
• DO NOT apply more than 2.4 fl oz/A of Pyroxlt HL (0.133 lb ai/A of pyroxasulfone) in a single application or as a maximum cumulative amount of from sequential applications in wheat per year. • Maximum number of applications per year: 2 (when applying rates less than single application maximum rate) • Separate sequential applications by at least 14 days. • DO NOT apply Pyroxlt HL to durum wheat. • DO NOT seed wheat deeper than 1.5 inches after a preplant application or before a preemergence or delayed preemergence application. • DO NOT apply Pyroxlt HL to flooded fields or saturated soils. • DO NOT apply preemergence if 1/4 inch or more rain is expected within 48 hours after application. • DO NOT irrigate fields after a preemergence or delayed preemergence application until wheat spiking. • DO NOT apply preplant, preemergence, or delayed preemergence to broadcast-seeded wheat. • DO NOT apply Pyroxlt HL preplant incorporated in wheat. • Wheat forage and hay can be fed or grazed 7 or more days after application.				
Precautions				
Apply Pyroxlt HL only to a uniform seedbed that is firm and free of clods, cracks, excess trash (previous crop residue), and weed growth. The seedbed MUST be prepared to ensure good seed row closure and soil coverage of the seed. Open furrows or poor furrow closure can result in crop injury. Use high quality seed. Plant seed at least 3/4-inch deep to avoid crop injury. The use of Pyroxlt HL in wheat may result in temporary or sustained growth suppression and chlorosis if high rainfall or irrigation leads to extended periods of water saturated soil during early seedling development. To reduce crop response, avoid applying Pyroxlt HL if a long period of rain is expected before wheat emergence.				

¹ Refer to Table 3 for definition of soil-texture groups.

Pyroxlt HL may be applied in a single application or in sequential applications relative to the growth stage of wheat.

State-specific Use Instructions for Preplant and Preemergence Applications in Idaho, Montana, Oregon,

and Washington. Apply **Pyroxt HL** preplant surface or preemergence in fall-seeded winter wheat for residual weed control. Apply **Pyroxt HL** only to a uniform seedbed that is firm and free of clods, cracks, excess trash (previous crop residue), and weed growth. The seedbed **MUST** be prepared to ensure good seed row closure and soil coverage of the seed. Open furrows or poor furrow closure can result in crop injury. Use high quality seed. Plant seed at least 1-inch deep, but not greater than 1.5-inches deep to avoid crop injury. Avoid planting seed into loose, powdery soil because unacceptable crop injury may result if soil settles and final planting depth is less than 1-inch. Apply **Pyroxt HL** preplant surface or preemergence at 1.0 to 2.0 fl oz/A on medium soils and at 1.2 to 2.0 fl oz/A on fine soils. Avoid application to soils with less than 2% organic matter and/or pH greater than 7.5 because unacceptable crop injury may occur. Follow all other application instructions and restrictions and limitations for preplant and preemergence applications of **Pyroxt HL** in wheat. State-specific Use Restrictions: **DO NOT** apply on spring wheat. **DO NOT** apply on coarse soils.

18.0 STORAGE AND DISPOSAL

DO NOT contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE

DO NOT use or store near heat or open flame. Store in original container in well-ventilated area separately from fertilizer, feed, or foodstuffs. Avoid cross-contamination with other pesticides.

PESTICIDE DISPOSAL

Open dumping is prohibited. Pesticide wastes are toxic. Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the hazardous waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING:

NONREFILLABLE CONTAINERS

Nonrefillable Container (flexible-bag-all weights): Nonrefillable container. **DO NOT** reuse or refill this container. Offer for recycling, if available. Dispose of empty container in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Rigid, Nonrefillable containers small enough to shake (i.e. with capacities equal to less than 5 gallons or 50 pounds).

Nonrefillable container. **DO NOT** reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning if available, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or a mix tank or collect rinsate at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Once container is rinsed, offer for recycling if available, or puncture and dispose of in a sanitary landfill.

19.0 LIMITATION OF WARRANTY AND LIABILITY

Read the entire directions for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following **CONDITIONS, DISCLAIMER OF WARRANTIES** and **LIMITATIONS OF LIABILITY**.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of WINFIELD SOLUTIONS, LLC. All such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, WINFIELD SOLUTIONS, LLC MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, THAT EXTEND BEYOND THE STATEMENTS MADE ON THIS LABEL. No agent of WINFIELD SOLUTIONS, LLC is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, WINFIELD SOLUTIONS, LLC disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY: TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL LOSSES, INJURIES OR DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, SHALL NOT EXCEED THE PURCHASE PRICE PAID OR AT WINFIELD SOLUTIONS, LLC'S ELECTION, THE REPLACEMENT OF PRODUCT.
